Utopias and Architecture Nathaniel Coleman, 2007-05-07 Utopian thought though commonly characterized as projecting a future without a past depends on golden models for re-invention of what is Through a detailed and innovative re-assessment of the work of three architects who sought to represent a utopian content in their work and a consideration of the thoughts of a range of leading writers Coleman offers the reader a unique perspective of idealism in architectural design With unparalleled depth and focus of vision on the work of Le Corbusier Louis I Kahn and Aldo van Eyck this book persuasively challenges predominant assumptions in current architectural discourse forging a new approach to the invention of welcoming built environments and transcending the limitations of both the postmodern and hyper-modern stance and orthodox modernist architecture

Rem Koolhaas, 2003

Architecture as Cultural and Political Discourse Daniel Grincer, 2016-02-26 This book is concerned with cultural and political discourses that affect the production of architecture It examines how these discursive mechanisms and technologies combine to normalise and aestheticise everyday practices It queries the means by which buildings are appropriated to give shape and form to political aspirations and values

Architecture is not overtly political It does not coerce people to behave in certain ways However architecture is constructed within the same rules and practices whereby people and communities self govern and regulate themselves to think and act in certain ways This book seeks to examine these rules through various case studies including the reconstructed Notre Dame Cathedral the Nazi era Munich Königsplatz Auschwitz concentration camp and the Prora resort Sydney's suburban race riots and the Australian Immigration Detention Centre on Christmas Island

New SubUrbanisms Judith K De Jong, 2013-09-11

Historically we see the city as the cramped crumbling core of development and culture and the suburb as the vast outlying wasteland convenient but vacant Contemporary urban design proves this wrong In *New SubUrbanisms* Judith De Jong explains the on going flattening of the American Metropolis as suburbs are becoming more like their central cities and cities more like their suburbs through significant changes in spatial and formal practice as well as demographic and cultural changes These revisionist practices are exemplified in the emergence of hybrid sub urban conditions such as parking practices the residential densification of suburbia hyper programmed public spaces and inner city big box retail among others Each of these hybridized conditions reflects to varying degrees the reciprocating influences of the urban and the suburban Each also offers opportunities for innovation in new formal and spatial practices that re configure conventional understandings of urban and suburban and in new ways of forming the evolving American metropolis Based on this new understanding De Jong argues for the development of new ways of building the city Aimed at students and practitioners of urban design and planning *New SubUrbanisms* attempts to re frame the contemporary metropolis in a way that will generate more instrumental engagement and ultimately better design

39 Microlectures Matthew Goulish, 2002-01-04 A series of accidents has brought you this book You may think of it not as a book but as a library an elevator an amateur performance in a nearby theatre Open it to the table of contents Turn to the page that sounds the most interesting to you Read a sentence or two Repeat the process Read this book as a creative act and feel encouraged

39 Microlectures In *Proximity of Performance* is a collection of miniature stories parables musings and thinkpieces on the nature of reading writing art collaboration performance life death the universe and everything It is a unique and moving document for our times full of curiosity and wonder thoughtfulness and pain Matthew Goulish founder member of performance group Goat Island meditates on these and other diverse themes proving along the way that the boundaries between poetry and criticism and between creativity and theory are a lot less fixed than they may seem The book is revelatory solemn yet at times hilarious and genuinely written to inspire or perhaps provoke creativity and thought

Interdisciplinary Design Hanif Kara, 2022-03-07 Architects and engineers both claim to be designers though how they define design and the approaches they use to realize it vary widely However their interaction has also created some of the world's most memorable enduring and impressive buildings The unprecedented impact of digital technologies illuminates the complexity and non linearity of the process that these designers go through while massively expanding both the ability to visualize and represent forms and to analyze their structural behavior It has obviously changed both architecture and engineering and so also the potential for interaction between them *Interdisciplinary Design* began as a course at Harvard GSD attended by graduate students in architecture and also by MIT graduate students in structural engineering and computation In this course students and instructors examined a series of built projects in order to develop new viewpoints and communication across disciplinary boundaries in teaching practice and construction

Rethinking the Meaning of Place Lineu Castello, 2016-03-23 The spread of newly invented places such as theme parks shopping malls and revamped historic areas necessitates a redefinition of the concept of place from an architectural perspective In this interdisciplinary work these invented places are categorized according to the different phenomenological experiences they are able to provide The book explores how such cloning spaces use placemaking and placemarketing in attempt to replicate the characteristics found in urban spaces traditionally viewed as successful and how these places can affect society's environmental perception A range of international empirical studies illustrates how such invented places can be perceived as legitimate urban spaces and contribute towards the quality of life in

today's cities **Matters of Revolution** Dominik Bartmanski, 2022-03-30 Symbols matter and especially those present in public spaces but how do they exert influence and maintain a hold over us Why do such materialities count even in the intensely digitalized culture This book considers the importance of urban symbols to political revolutions examining manifold reasons for which social movements necessitate the affirmation or destruction of various material icons and public monuments What explains variability of life cycles of certain classes of symbols Why do some of them seem more potent than others Why do people exhibit nostalgic attachments to some symbols of the controversial past and vehemently oppose others What nourishes and threatens the social life of icons Through comparative analyses of major iconic processes following the epochal revolution of 1989 in Berlin and Warsaw the book argues that revolutionary action needs objects and sites which concretize the transformative redrawing of the symbolic boundaries between the sacred and profane good and evil before and after and progressive and reactionary the symbolic shifts that every revolution implies in theory and formalizes in practice Public symbols ensconced within actual urban spaces provide indispensable visibility to human values and social changes As affective topographies that externalize collective feelings their very presence and durability is meaningful and so are the revolutionary rituals of preservation and destruction directed at those spaces Far from being mere gestures or token signifiers they have their own gravity with profound cultural ramifications This volume will appeal to sociologists anthropologists geographers and social theorists with interests in urban studies public heritage material culture political revolution and social movements **Architectural Draughtsmanship** Enrique Castaño Perea, Ernesto Echeverría Valiente, 2017-09-25 This is the proceedings of the XVI International Congress of Graphic Design in Architecture EGA 2016 held in Alcal de Henares Spain in June 2016 About 200 professionals and researchers from 18 different countries attended the Congress This book will be of interest to researchers in the field of architecture and Engineering Topics discussed are Innovations in Architecture graphic design and architecture history and heritage among others
