Interiors Construction Manual Gerhard Hausladen, Karsten Tichelmann, 2012-12-10. Soccer stadiums, airports, theaters, museums: it falls to very few architects to tackle spectacular building tasks like these. The everyday work of most architects is more often focused on manageable projects like the renovation, remodeling or rebuilding of single and multi-family houses, schools and offices. Whatever the nature of the building task, interior construction is always a significant design and qualitative challenge that calls for highly detailed technical expertise. After all, it affects the realm that will be brought to life and utilized by the user when the task is finished and whose aesthetic and functional serviceability will be put to the test each and every day. The Interior Construction Manual supports planners in their daily work as a practical planning aid and reference work with the relevant standards, guidelines, reference details and constructional solutions, all illustrated by built example projects. It brings together the crucial facts on all aspects of interior construction and presents the key fundamentals of building physics, fire protection, interior construction systems and openings. In addition, it offers concrete tips on integrated planning, approaches, energy and sustainability issues, materials used in interior construction, hazardous substances and dealing with building services and light planning.
