## **Moving Targets Towards Monitoring Rural Decentralisation:**

**Decentralisation in Africa** Gordon Crawford, Christof Hartmann, 2008 Decentralisation in Afrika is een sobere beoordeling van wat decentralisatie precies kan bereiken Decentralisatie van overheden in Afrikaanse landen en elders in de derde wereld krijgt de laatste tijd een impuls vaak gedreven door Multilaterale en bilaterale instanties de donoren Maar worden de voordelen hiervan wel gerealiseerd In dit boek worden vraagtekens gezet bij de kwestie of decentralisatie wel een gunstige uitweg biedt voor de armoede en het conflict in Afrika

**Moving Targets** Fon van Oosterhout, 2002 The theme of decentralization has for decades caught the interest of professionals in political science and public administration and to a lesser degree economists and development policy makers and more recently social development professionals and experts in institutional development In this book the focus is on democratic decentralization probably the most difficult form of decentralization because governments can best perform their roles in service delivery and building democracy covering issues such as participation accountability and the politics of choice This title draws attention to the crucial issues in decentralization and monitoring and analyzes the guiding principles for setting up the system It invites the reader to consider the advantages of a flexible approach in monitoring through the focus on plausible rather than real causal relationships using a mix of quantitative and qualitative indicators involving not only \_\_experts\_\_ but all stakeholders including the local communities and finally it prioritizes the learning aspects in monitoring

Time for Transformation reflects the collaboration of a wide array of African regional institutions and development partners under the auspices of the Infrastructure Consortium for Africa. It presents the findings of the Africa Infrastructure Country Diagnostic (AICD), a project launched following a commitment in 2005 by the international community after the G8 summit at Gleneagles, Scotland, to scale up financial support for infrastructure development in Africa. The lack of reliable information in this area made it difficult to evaluate the success of past interventions, prioritize current allocations, and provide benchmarks for measuring future progress, hence the need for the AICD. Africa's infrastructure sectors lag well behind those of the rest of the world, and the gap is widening. Some of the main policy-relevant findings highlighted in the book include the following:

- Infrastructure in the region is exceptionally expensive, with tariffs being many times higher than those found elsewhere.
- Inadequate and expensive infrastructure is retarding growth by 2 percentage points each year.
- Solving the problem will cost over US\$90 billion per year, which is more than twice what is being spent in Africa today.
- However, money alone is not the answer. Prudent policies, wise management, and sound maintenance can improve efficiency, thereby stretching the infrastructure dollar.
- There is the potential to recover an additional US\$17 billion a year from within the existing infrastructure resource envelope simply by improving efficiency.
- For example, improved revenue collection and utility management could generate US\$3.3 billion per year.
- Regional power trade could reduce annual costs by US\$2 billion.
- And deregulating the trucking industry could reduce freight costs by one-half.

So raising more funds without also tackling inefficiencies would be like pouring water into a leaking bucket. Finally, the power sector and fragile states represent particular challenges. Even if every efficiency in every infrastructure sector could be captured, a substantial funding gap of \$31 billion a year would remain. Nevertheless, the African people and economies cannot wait any longer. Now is the time to begin the transformation to sustainable development.

Sustainability and the Rights of Nature in Practice, Cameron La Follette, Chris Maser, 2019-09-30

Sustainability and the Rights of Nature in Practice is the much-needed complementary volume to Sustainability and the Rights of Nature: An Introduction (CRC Press, May 2017). The first book laid out the international precursors for the Rights of Nature doctrine and described the changes required to create a Rights of Nature framework that supports Nature in a sustainable relationship rather than as an exploited resource. This follow-up work provides practitioners from diverse cultures around the world an opportunity to describe their own projects, successes, and challenges in moving toward a legal personhood for Nature. It includes contributions from Nepal, New Zealand, Canadian Native American cultures, Kiribati, the United States, and Scotland, amongst others, by practitioners working on projects that can be integrated into a Rights of Nature framework. The authors also tackle required changes to shift the paradigm, such as thinking of Nature in a sacred manner, reorienting Nature's rights and human rights, the conceptualization of restoration, and the removal of large-scale energy infrastructure. Curated by experts in the field, this expansive collection of papers will prove invaluable to a wide array of policymakers and administrators.
