Toxicity: 77 Must-Know Predictions of Organic Compounds Mohammad Hossein Keshavarz, 2023-10-04 Due to the advances of various methods for the prediction of toxicity of organic compounds and ionic liquids ILs it is necessary to review these methods for scientists and students It is essential to compare the advantages and shortcomings of these methods Since many organic compounds and ILs are synthesized each year this book introduces suitable models for the assessment of their toxicities This book reviews the best predictive methods for the prediction of toxicity of organic compounds and ILs which were derived by in vitro or in vivo experiments Different available quantitative structure toxicity relationship QSTR models based on various descriptors have been discussed to predict toxicity parameters such as LD50 50% lethal dose EC50 the concentration of the desired IL that produces mortality of 50 percent of the bacterial population and log IGC50 1 logarithm of 50% growth inhibitory concentration of *T. pyriformis* of various classes of organic compounds and ILs The reliability of these methods is compared and discussed Each chapter contains some complimentary problems with their answers which can improve the experience of students and researchers The introduced subjects are suitable for advanced students in chemistry biochemistry medicinal chemistry and chemical engineering Nutritional Toxicity: Physiology, Nutrition, and Human Health Tingting Ju, Siddika Yalcin, Misha Vrolijk, 2025-08-20 Food is a basic human need Our diet provides the human body with nutrients and other elements that are necessary for maintaining a good health Sufficient intake of nutrients is therefore considered vital However in the past years the environmental impact on our food and an increased adherence to the Westernized diet which consists of ultra processed foods have negatively impacted the quality of our food and thus also our nutrition In addition to these influences today's food is produced differently and food patterns change and shift towards more sustainable diets A major change from animal meat to more plant based foods is occurring whilst new protein sources are introduced such as insects seaweed and artificial protein sources Food additives such as artificial sweeteners are also becoming increasingly popular These environmental and sustainable developments have led to the introduction of new foods different proportions of nutrients in our foods and new elements to our food that altogether are potentially harmful for our health Growing interest in the use of nutrient supplements also introduces potential risks with consuming levels of nutrients above those deemed tolerable or safe Therefore having a better understanding of nutritional toxicity in the context of the modern food industry becomes fundamental **Alternatives to the Use of Live Vertebrates in Biomedical Research and Testing**, 1997 **Toxicology Research Projects Directory**, 1980-04 **Food Additive Toxicology** Joseph A.
