The Mismeasure of Minds Michael E. Staub, 2018-09-25 The 1954 Brown v Board of Education decision required desegregation of America's schools but it also set in motion an agonizing multidecade debate over race class and IQ In this innovative book Michael E Staub investigates neuropsychological studies published between Brown and the controversial 1994 book *The Bell Curve* In doing so he illuminates how we came to view race and intelligence today In tracing how research and experiments around such concepts as learned helplessness deferred gratification hyperactivity and emotional intelligence migrated into popular culture and government policy Staub reveals

long standing and widespread dissatisfaction not least among middle class whites with the metric of IQ He also documents the devastating consequences above all for disadvantaged children of color as efforts to undo discrimination and create enriched learning environments were recurrently repudiated and defunded By connecting psychology race and public policy in a single narrative Staub charts the paradoxes that have emerged and that continue to structure investigations of racism even into the era of contemporary neuroscientific research Neuropsychological Assessment Muriel Deutsch Lezak,2004 This revised text provides coverage of research and clinical practice in neuropsychology The 4th edition contains new material on tests assessment techniques neurobehavioral disorders and treatment effects **Dyslexia and Literacy** Gavin Reid,Janice Wearmouth,2002-10-11 Dyslexia and Literacy provides a comprehensive practical introduction for all professionals seeking an understanding of dyslexia in children Divided into four parts the book firstly introduces the various theoretical perspectives and follows this up with identification and assessment techniques with an emphasis on practical classroom related issues The third part of the text covers topics related to the school curriculum and a final section covers issues that relate to the learning process **Insanity and Genius** Harry Eiss,2014-06-02 In his book about the discovery of the structure of DNA James Watson wrote So we had lunch telling ourselves that a structure this beautiful just had to exist Indeed the quest most often asked by scientists about a scientific theory is Is it beautiful Yes beauty equals truth Scientists know mathematicians know But the beauties the truths of mathematics and science were not the truths that inspired the author as a child and he intuitively knew that the truths he needed come from a different way of knowing a way of knowing not of the world of logic and reason and explanation though they have a value but rather a way of knowing that is of the world expression a world that enters the truths beyond the grasp of logic That is what this book is all about It is an exploration of the greatest minds of human existence struggling to understand the deepest truths of the human condition This second edition updates the previous one incorporating new publications on Van Gogh recent discoveries in neurology psychology and the rapid developments in understanding DNA and biotechnology We ve come a long way already from that original discovery by Watson and his coauthor Francis Crick *Evaluation and Treatment of Neuropsychologically Compromised Children* Darlyne G.
