Recent Trends In Combinatorics:

Recent Trends in Combinatorics Andrew Beveridge, Jerrold R. Griggs, Leslie Hogben, Gregg Musiker, Prasad Tetali, 2016-04-12 This volume presents some of the research topics discussed at the 2014 2015 Annual Thematic Program Discrete Structures Analysis and Applications at the Institute for Mathematics and its Applications during Fall 2014 when combinatorics was the focus. Leading experts have written surveys of research problems making state of the art results more conveniently and widely available. The three part structure of the volume reflects the three workshops held during Fall 2014. In the first part topics on extremal and probabilistic combinatorics are presented, part two focuses on additive and analytic combinatorics, and part three presents topics in geometric and enumerative combinatorics. This book will be of use to those who research combinatorics directly or apply combinatorial methods to other fields. *Recent Trends in Combinatorics*

Ervin Győri, Vera Sós, 2001-04-05 This collection of surveys and research papers on recent topics of interest in combinatorics is dedicated to Paul Erdős who attended the conference and who is represented by two articles in the collection including one unfinished which he was writing on the eve of his sudden death. Erdős was one of the greatest mathematicians of his century and often the subject of anecdotes about his somewhat unusual lifestyle. A new preface written by friends and colleagues gives a flavor of his life including many such stories and also describes the broad outline and importance of his work in combinatorics and other related fields. *Recent Trends in Algebraic Combinatorics*

Hélène Barcelo, Gizem Karaali, Rosa Orellana, 2019-01-21 This edited volume features a curated selection of research in algebraic combinatorics that explores the boundaries of current knowledge in the field. Focusing on topics experiencing broad interest and rapid growth, invited contributors offer survey articles on representation theory, symmetric functions, invariant theory, and the combinatorics of Young tableaux. The volume also addresses subjects at the intersection of algebra, combinatorics, and geometry, including the study of polytopes, lattice points, hyperplane arrangements, crystal graphs, and Grassmannians. All surveys are written at an introductory level that emphasizes recent developments and open problems. An interactive tutorial on Schubert Calculus emphasizes the geometric and topological aspects of the topic and is suitable for combinatorialists as well as geometrically minded researchers seeking to gain familiarity with relevant combinatorial tools. Featured authors include prominent women in the field known for their exceptional writing of deep mathematics in an accessible manner. Each article in this volume was reviewed independently by two referees. The volume is suitable for graduate students and researchers interested in algebraic combinatorics. *Recent Trends in Algebraic Combinatorics*
