**User-Innovation** Viktor Braun, Cornelius Herstatt, 2009-06-06 Economic growth is highly dependent on technological progress and innovation yet the sources from which these innovations originate are still largely misunderstood and untapped Recent research has demonstrated that users rather than manufacturers are often a critical source of innovation in numerous fields from extreme sports to medical devices to software This book systematically identifies the most important barriers to user innovation and critically evaluates the democratization of innovation argument by critically assessing the main legal

economic technological and societal barriers to user innovation for the first time and proposing alternative possibilities Through original research the author reveals the dynamics of user innovation and offers strategies for minimizing those factors that inhibit and stifle the spread of this phenomenon From this analysis it becomes clear that user innovation has become more difficult over time and that the problem is now of how manufacturers can enable users to overcome the discussed barriers and simultaneously benefit from such consumer driven activities Arguing that licenses are not just an important technology commercialization instrument but are tools critical to generating innovations the author explains how licenses can in certain situations be employed to help users overcome some of the barriers to user innovation User Innovation Barriers to Democratization and IP Licensing is a practical guidebook as well as a startlingly original work of scholarship that will be essential reading for years to come Technology Market Transactions Frank Tietze,2012-01-01 This study of technology auctions is long overdue The book provides a better understanding of intermediaries and their role and impact in markets for technology Both scholars and managers will find it insightful Alfonso Gambardella Bocconi University Italy From this book managers academics and innovation policy makers will all benefit from new insights into the complex relationships between external technology exploitation strategies patents technology trade and open innovation processes The convincing evidence drawn from a dataset of technology auctions helps firms to understand which of their patents are suitable for auction and also provides guidance to intermediaries to help improve the auction models The data presented in this book contributes to further price transparency on technology markets and hence to their further development Hugo Tschirky ETH Zurich Switzerland Within the open innovation paradigm firms need to operate efficiently in markets for technology This book presents original research on technology transactions market intermediaries and specifically the role of auctions as a novel transaction model for patented technologies Frank Tietze delivers an in depth discussion of the impact of empirical results upon transaction cost theory and in so doing provides the means for better understanding technology transaction processes in general and auctions in particular Substantiating transaction cost theory with empirical auction data the author goes on to explore how governance structures need to be designed for effective distributed innovation processes He concludes that the auction mechanism is a viable transaction model and illustrates that the auction design as currently operated by market intermediaries requires thorough adjustments Various options for possible improvements are subsequently prescribed The theoretical facets of this book will strongly appeal to business economists whilst its practical implications will provide an illuminating read for both academics and practitioners in the fields of innovation and intellectual property Revealing empirically substantiated technology prices this book will also prove to be of great interest to policy makers for further developing the markets for technology Towards Intellectual Property Rights Management Dolores Modic,Nadja Damij,2018-01-16 This book provides insights into the intellectual property rights IPR managerial practices of key IPR executives from a range of multinational companies including major research and
