Representations of AF-algebras and of the Group U([Symbol for Infinity]) Șerban-Valentin Strătilă,Dan-Virgil Voiculescu,1975 *Representation of Lie Groups and Related Topics* Anatoliĭ Moiseevich Vershik,Dmitriĭ Petrovich Zhelobenko,1990 Eight papers provide mature readers with careful review of progress through about 1983 toward the creation of a theory of the representations of infinite dimensional Lie groups and algebras and of some related topics Recent developments in physics have provided major impetus for the development of such a theory and the volume will be of special interest to mathematical physicists quantum field theorists Translated from the Russian edition of unstated date and beautifully produced which at the price it should be Book club price 118 NW Annotation copyrighted by Book News Inc Portland OR Categories of Symmetries and Infinite-dimensional Groups Yu. A. Neretin,1996 For mathematicians working in group theory the study of the many infinite dimensional groups has been carried out in an individual and non coherent way For the first time these apparently disparate groups have been placed together in order to construct the big picture This book successfully gives an account of this and shows how such seemingly dissimilar types such as the various groups of operators on Hilbert spaces or current groups are shown to belong to a bigger entity This is a ground breaking text will be important reading for advanced undergraduate and graduate mathematicians Developments and Retrospectives in Lie Theory Geoffrey Mason,Ivan Penkov,Joseph A. Wolf,2014-11-12 The Lie Theory Workshop founded by Joe Wolf UC Berkeley has been running for over two decades At the beginning the top universities in California and Utah hosted the meetings which continue to run on a quarterly basis Experts in representation theory Lie theory from various parts of the US Europe Asia China Japan Singapore Russia Canada and South and Central America were routinely invited to give talks at these meetings Nowadays the workshops are also hosted at universities in Louisiana Virginia and Oklahoma These Lie theory workshops have been sponsored by the NSF noting the talks have been seminal in describing new perspectives in the field covering broad areas of current research The contributors have all participated in these Lie theory workshops and include in this volume expository articles which will cover representation theory from the algebraic geometric analytic and topological perspectives with also important connections to math physics These survey articles review and update the prominent seminal series of workshops in representation Lie theory mentioned above and reflects the widespread influence of those workshops in such areas as harmonic analysis representation theory differential geometry algebraic geometry number theory and mathematical physics Many of the contributors have had prominent roles in both the classical and modern developments of Lie theory and its applications *Quantum Probability And Infinite Dimensional Analysis: From Foundations To Applpications* Uwe Franz,Michael Schurmann,2005-01-12 This volume collects research papers in quantum probability and

related fields and reflects the recent developments in quantum probability ranging from the foundations to its applications

Developments and Trends in Infinite-Dimensional Lie Theory Karl-Hermann Neeb, Arturo Pianzola, 2010-10-17 This collection of invited expository articles focuses on recent developments and trends in infinite dimensional Lie theory which has become one of the core areas of modern mathematics The book is divided into three parts infinite dimensional Lie super algebras geometry of infinite dimensional Lie transformation groups and representation theory of infinite dimensional Lie groups Contributors B Allison D Belti W Bertram J Faulkner Ph Gille H Gl ckner K H Neeb E Neher I Penkov A Pianzola D Pickrell T S Ratiu N R Scheithauer C Schweigert V Serganova K Styrkas K Waldorf and J A Wolf **Algebraic Methods in**

Operator Theory Raul E. Curto, Palle E.T. Jorgensen, 2012-12-06 The theory of operators stands at the intersection of the frontiers of modern analysis and its classical counterparts of algebra and quantum mechanics of spectral theory and partial differential equations of the modern global approach to topology and geometry of representation theory and harmonic analysis and of dynamical systems and mathematical physics The present collection of papers represents contributions to a conference and they have been carefully selected with a view to bridging different but related areas of mathematics which have only recently displayed an unexpected network of interconnections as well as new and exciting cross fertilizations Our unifying theme is the algebraic view and approach to the study of operators and their applications The complementarity between the diversity of topics on the one hand and the unity of ideas on the other has been stressed Some of the longer contributions represent material from lectures in expanded form and with proofs for the most part However the shorter papers as well as the longer ones are an integral part of the picture they have all been carefully refereed and revised with a view to a unity of purpose timeliness readability and broad appeal Raul Curto and Palle E T **Geometric Analysis and**

Integral Geometry Eric Todd Quinto, Fulton Gonzalez, Jens Gerlach Christensen, 2013 This volume contains the proceedings of the AMS Special Session on Radon Transforms and Geometric Analysis in honour of Sigurdur Helgason's 85th Birthday held from January 4-7 2012 in Boston MA and the Tufts University Workshop on Geometric Analysis on Euclidean and Homogeneous Spaces held from January 8-9 2012 in Medford MA This volume provides an historical overview of several decades in integral geometry and geometric analysis as well as recent advances in these fields and closely related areas It contains several articles focusing on the mathematical work of Sigurdur Helgason including an overview of his research by Gestur Olafsson and Robert Stanton The first article in the volume contains Helgason's own reminiscences about the development of the group theoretical aspects of the Radon transform and its relation to geometric analysis Other contributions cover Radon transforms harmonic analysis Penrose transforms representation theory wavelets partial differential operators on groups and inverse problems in tomography and cloaking that are related to integral geometry Many articles contain both an overview of their respective fields as well as new research results The volume will therefore appeal to experienced researchers as well as a younger generation of mathematicians With a good blend of pure and applied

topics the volume will be a valuable source for interdisciplinary research
