Handbook of Child Psychology and Developmental Science, Ecological Settings and Processes, 2015-03-31

The essential reference for human development theory, updated and reconceptualized. The Handbook of Child Psychology and Developmental Science, a four volume reference, is the field defining work to which all others are compared. First published in 1946 and now in its Seventh Edition, the Handbook has long been considered the definitive guide to the field of developmental science. Volume 4, Ecological Settings and Processes in Developmental Systems, is centrally concerned with the people, conditions and events outside individuals that affect children and their development. To understand children's development, it is both necessary and desirable to embrace all of these social and physical contexts. Guided by the relational developmental systems meta-theory, the chapters in the volume are ordered in a manner that begins with the near proximal contexts in which children find themselves and moving through to distal contexts that influence children in equally compelling if less immediately manifest ways. The volume emphasizes that the child's environment is complex, multi-dimensional and structurally organized into interlinked contexts; children actively contribute to their development; the child and the environment are inextricably linked; and contributions of both child and environment are essential to explain or understand development. Understand the role of parents, other family members, peers and other adults; teachers, coaches, mentors in a child's development. Discover the key neighborhood, community and institutional settings of human development. Examine the role of activities, work and media in child and adolescent development. Learn about the role of medicine, law, government, war and disaster, culture and history in contributing to the processes of human development. The scholarship within this volume and as well across the four volumes of this edition illustrate that developmental science is in the midst of a very exciting period. There is a paradigm shift that involves increasingly greater understanding of how to describe, explain and optimize the course of human life for diverse individuals living within diverse contexts. This Handbook is the definitive reference for educators, policy makers, researchers, students and practitioners in human development, psychology, sociology, anthropology and neuroscience.
