Lyapunov Functions In Differential Games:

Lyapunov Functions in Differential Games Vladislav I Zhukovskiy, 2003-01-16 A major step in differential games is determining an explicit form of the strategies of players who follow a certain optimality principle To do this the associated modification of Bellman dynamic programming problems has to be solved for some differential games this could be Lyapunov functions whose arsenal has been supplied by stability theory This approach which combines dynamic programming and the Lyapunov function method leads to coefficient criteria or ratios of the game math model parameters with which optimal strategies of the players not only exist but their analytical form can be specified In this book coefficient criteria are derived for numerous new and relevant problems in the theory of linear quadratic multi player differential games Those criteria apply when the players formulate their strategies independently non co operative games and use non Nash equilibria or when the game model recognizes noise perturbation and other uncertainties of which only their ranges are known differential games under uncertainty This text is useful for researchers engineers and students of applied mathematics control theory and the engineering sciences

Differential Games and Applications Tamer Başar, Pierre Bernhard, 1989 This volume contains fifteen articles on the topic of differential and dynamic games focusing on both theory and applications It covers a variety of areas and presents recent developments on topics of current interest It should be useful to researchers in differential and dynamic games systems and control operations research and mathematical economics *Dynamics, Bifurcations and Control* Fritz Colonius, Lars Grüne, 2003-07-01 This volume originates from the Third Nonlinear Control Workshop namics Bifurcations and Control held in Kloster Irsee April 13 2001 As the preceding workshops held in Paris 2000 and in Ghent 1999 it was organized within the framework of Nonlinear Control Network funded by the European Union <http://www.supelec.fr/lss/NCN> The papers in this volume center around those control problems where phenomena and methods from dynamical systems theory play a dominant role Despite the large variety of techniques and methods present in the contributions a rough subdivision can be given into three areas Bifurcation problems stabilization and robustness and global dynamics of control systems A large part of the fascination in nonlinear control stems from the fact that it is deeply rooted in engineering and mathematics alike The contributions to this volume reflect this double nature of nonlinear control We would like to take this opportunity to thank all the contributors and the referees for their careful work Furthermore it is our pleasure to thank Franchise Lamnabhi Lagarrigue the coordinator of our network for her support in organizing the workshop and the proceedings and for the tremendous efforts she puts into this network bringing the cooperation between the different groups to a new level In particular the exchange and the active participation of young scientists also reflected in the Pedagogical Schools within the Network is an asset for the field of nonlinear control

The Berge Equilibrium: A Game-Theoretic Framework for the Golden Rule of Ethics Mindia E. Salukvadze, Vladislav I. Zhukovskiy, 2020-02-18 The goal of this book is to elaborate on the main principles of the theory of the Berge equilibrium by answering the following two questions What are the basic properties of the Berge equilibrium Does the Berge equilibrium exist and how can it be calculated The Golden Rule of ethics which appears in Christianity Judaism Islam Buddhism Confucianism and other world religions states the following Behave towards others as you would like them to behave towards you In any game each party of conflict seeks to maximize some payoff Therefore for each player the Golden Rule is implemented through the maximization of his/her payoff by all other players which matches well with the concept of the Berge equilibrium The approach presented here will be of particular interest to researchers including undergraduates and graduates and economists focused on decision making under complex conflict conditions The peaceful resolution of conflicts is the cornerstone of the approach as a matter of fact the Golden Rule precludes military clashes and violence In turn the new approach requires new methods in particular the existence problems are reduced to saddle point design for the Germeier convolution of payoff functions with further transition to mixed strategies in accordance with the standard procedure employed by E Borel J von Neumann J Nash and their followers Moreover this new approach has proven to be efficient and fruitful with regard to a range of other important

problems in mathematical game theory which are considered in the Appendix Pursuit-Evasion Differential Games Y. Yavin, M. Pachter, 2014-06-28 Twenty papers are devoted to the treatment of a wide spectrum of problems in the theory and applications of dynamic games with the emphasis on pursuit evasion differential games The problem of capturability is thoroughly investigated also the problem of noise corrupted state measurements Attention is given to aerial combat problems and their attendant modelling issues such as variable speed of the combatants the three dimensionality of physical space and the combat problem i e problems related to role determination

Generalized Solutions of First Order PDEs Andrei I. Subbotin, 2013-06-29 Hamilton Jacobi equations and other types of partial differential equations of the first order are dealt with in many branches of mathematics mechanics and physics These equations are usually nonlinear and functions vital for the considered problems are not smooth enough to satisfy these equations in the classical sense An example of such a situation can be provided by the value function of a differential game or an optimal control problem It is known that at the points of differentiability this function satisfies the corresponding Hamilton Jacobi Isaacs Bellman equation On the other hand it is well known that the value function is as a rule not everywhere differentiable and therefore is not a classical global solution Thus in this case as in many others where first order PDEs are used there arises necessity to introduce a notion of generalized solution and to develop theory and methods for constructing these solutions In the 50s 70s problems that involve nonsmooth solutions of first order PDEs were considered by Bakhvalov Evans Fleming Gel'fand Godunov Hopf Kuznetsov Ladyzhenskaya Lax Oleinik Rozhdestvenskiĭ Samarskii Tikhonov and other mathematicians Among the investigations of this period we should mention the results of S N Kruzhkov which were obtained for Hamilton Jacobi equation with convex Hamiltonian A review of the investigations of this period is beyond the limits of the present book A sufficiently complete bibliography can be found in 58 126 128 141

Systems: Computation and Control Freek Wiedijk, Oded Maler, Amir Pnueli, 2003-07-01 This volume contains the proceedings

of the Sixth Workshop on Hybrid Systems Computation and Control HSCC 2003 which was held in Prague during April 3-5 2003. The Hybrid Systems workshops attract researchers interested in the modeling, analysis, control, and implementation of systems which involve the interaction of both discrete and continuous state dynamics. The newest results and latest developments in hybrid system models, formal methods for analysis and control, computational tools, as well as new applications and examples are presented at these annual meetings. The Sixth Workshop continued the series of workshops held in Grenoble, France; HART 97, Berkeley, California, USA; HSCC 98, Nijmegen, The Netherlands; HSCC 99, Pittsburgh, Pennsylvania, USA; HSCC 2000, Rome, Italy; HSCC 2001, and Stanford, California, USA; HSCC 2002. Proceedings of these workshops have been published by Springer Verlag in the Lecture Notes in Computer Science (LNCS) series. This year we assembled a technical program committee with a broad expertise in formal methods in computer science, control theory, applied mathematics, and artificial intelligence. We received a set of 75 high quality submitted papers. After detailed review and discussion of these papers by the program committee, 36 papers were accepted for presentation at the workshop, and the final versions of these papers appear in this volume.

Hybrid Systems: Computation and Control Oded Maler, Amir Pnueli, 2003-03-18. This book constitutes the refereed proceedings of the 6th International Workshop on Hybrid Systems Computation and Control HSCC 2003 held in Prague, Czech Republic, in April 2003. The 36 revised full papers presented were carefully reviewed and selected from 75 submissions. All current issues in hybrid systems are addressed, including formal methods for analysis and control, computational tools, as well as innovative applications in various fields such as automotive control, the immune system, electrical circuits, operating systems, and human brains.

H -Control Theory Edoardo Mosca, Luciano Pandolfi, 2006-11-14. The fundamental problem in control engineering is to provide robust performance to uncertain plants. H control theory began in the early eighties as an attempt to lay down rigorous foundations on the classical robust control requirements. It now turns out that H control theory is at the crossroads of several important directions of research: space or polynomial approach to control and classical interpolation theory, harmonic analysis and operator theory, minimax, LQ, stochastic control, and integral equations. The book presents the underlying fundamental ideas, problems, and advances through the pen of leading contributors to the field, for graduate students and researchers in both engineering and mathematics.
