Machine Translation A View From The Lexicon Artificial Intelligence:

Machine Translation Bonnie Jean Dorr, 1993-06 This book describes a novel cross linguistic approach to machine translation that solves certain classes of syntactic and lexical divergences by means of a lexical conceptual structure that can be composed and decomposed in language specific ways This approach allows the translator to operate uniformly across many languages while still accounting for knowledge that is specific to each language The translation model can be used to map a source language sentence to a target language sentence in a principled fashion It is built on the basis of a parametric approach making it easy to change from one language to another by setting syntactic switches for each language and providing lexical descriptions for each language without having to write a whole new processor for each language Dorr's approach advances the field of machine translation in a number of important ways it provides a uniform processor in which the same syntactic and lexical semantic processing modules are used for each language it is interlingual able to derive an underlying language independent form of the source language that allows any of the three target languages Spanish English or German to be produced from this form and it describes a systematic mapping between the lexical semantic level and the syntactic level that allows the appropriate target language words to be selected and realized despite the potential for syntactic and lexical divergences Bonnie Jean Dorr is Assistant Professor in the Computer Science Department at the University of Maryland

Machine Translation: From Research to Real Users Stephen D. Richardson, 2003-06-30 AMTA 2002 From Research to Real Users Ever since the showdown between Empiricists and Rationalists a decade ago at TMI 92 MT researchers have hotly pursued promising paradigms for MT including data driven approaches e.g statistical example based and hybrids that integrate these with more traditional rule based components During the same period commercial MT systems with standard transfer architectures have evolved along a parallel and almost unrelated track increasing their coverage primarily through manual update of their lexicons we assume and achieving much broader acceptance and usage principally through the medium of the Internet Webpage translators have become commonplace a number of online translation services have appeared including in their offerings both raw and postedited MT and large corporations have been turning increasingly to MT to address the exigencies of global communication Still the output of the transfer based systems employed in this expansion represents but a small drop in the ever growing translation marketplace bucket

Artificial Intelligence International Conference on Artificial Intelligence: Methodology, Systems, Applications 1994, Sofia, Bulgaria, 1994 *Intelligent Language Tutors* V. Melissa Holland, Jonathan D. Kaplan, Michelle R. Sams, 2014-01-09 The techniques of natural language processing NLP have been widely applied in machine translation and automated message understanding but have only recently been utilized in second language teaching This book offers both an argument for and a critical examination of this new application with an examination of how systems may be designed to exploit the power of NLP accomodate its limitations and minimize its risks This volume marks the first collection of work in the U S and Canada that incorporates advanced human language technologies into language tutoring systems covering languages as diverse as Arabic Spanish Japanese and English The book is organized into sections that express the levels of analysis dealt with in learning and teaching a language and with the tasks of the student as writer reader conversant and actor in the world These sections bring together research by specialists in linguistics artificial intelligence psychology instructional design and language teaching In addition to providing detailed descriptions of working systems amply illustrated with screens from lesson and authoring interfaces the contributors address a spectrum of common issues What can current NLP technology contribute to computer assisted language instruction and to research on language learning How can this technology meet the demands of pedagogical theory for communicative language teaching in authentic contexts How can designers constrain tutoring environments to ensure accurate analysis of learners language What can NLP based systems teach us about language acquisition about linguistic theory and about theories of language pedagogy What lessons have been learned in using these systems to date Discipline specific issues are illuminated as well the relative merits of the major syntactic frameworks for NLP based language tutoring the adaptation of theories like lexical conceptual structure to support semantic interpretation the integration of input language with visual microworlds and dialogue games the pragmatics of the tutoring discourse the selection of instructional principles to guide system design and the accomodation of design to individual differences and learner styles A concluding section assesses this work from larger theoretical and practical perspectives experimental psychology and psycholinguistics linguistics language teaching and second language acquisition research Machine Translation and the Information Soup David Farwell, Laurie Gerber, Eduard Hovy, 2003-06-29 Machine Translation and the Information Soup Over the past fty years machine translation has grown from a tantalizing dream to a respectable and stable scienti c linguistic enterprise with users c mercial systems university research and government participation But until very recently MT has been performed as a relatively distinct operation so what isolated from other text processing Today this

situation is changing rapidly The explosive growth of the Web has brought multilingual text into the reach of nearly everyone with a computer We live in a soup of information an increasingly multilingual bouillabaisse And to partake of this soup we can use MT systems together with more and more tools and language processing technologies information retrieval engines automated text summarizers and multimodal and multilingual displays Though some of them may still be rather experimental and though they may not quite t together well yet it is clear that the future will offer text manipulation systems that contain all these functions seamlessly interconnected in various ways PRICAI 2010: Trends in Artificial Intelligence Byoung-Tak

Zhang,2010 **Advances in Computers** ,1999-09-14 Since its first volume in 1960 *Advances in Computers* has presented detailed coverage of innovations in hardware and software and in computer theory design and applications It has also provided contributors with a medium in which they can examine their subjects in greater depth and breadth than that allowed by standard journal articles As a result many articles have become standard references that continue to be of significant lasting value despite the rapid growth taking place in the field **The Human Factor in Machine Translation**

Sin-wai Chan,2018-05-08 Machine translation has become increasingly popular especially with the introduction of neural machine translation in major online translation systems However despite the rapid advances in machine translation the role of a human translator remains crucial As illustrated by the chapters in this book man machine interaction is essential in machine translation localisation terminology management and crowdsourcing translation In fact the importance of a human translator before during and after machine processing cannot be overemphasised as human intervention is the best way to ensure the translation quality of machine translation This volume explores the role of a human translator in machine translation from various perspectives affording a comprehensive look at this topical research area This book is essential reading for anyone involved in translation studies machine translation or interested in translation technology

Incremental Speech Translation Jan W. Amtrup, 2003-06-26 Human language capabilities are based on mental procedures that are closely linked to the time domain Listening understanding and reacting on the one hand as well as planning formulating and speaking on the other are performed in a highly overlapping manner thus allowing inter human communication to proceed in a smooth and fluent way Although it happens to be the natural mode of human language interaction incremental processing is still far from becoming a common feature of today's language technology Instead it will certainly remain one of the big challenges for research activities in the years to come Usually considered difficult to a degree that renders it almost intractable for practical purposes incremental language processing has recently been attracting a steadily growing interest in the spoken language processing community Its notorious difficulty can be attributed mainly to two reasons Due to the inaccessibility of the right context global optimization criteria are no longer available This loss must be compensated for by communicating larger search spaces between system components or by introducing appropriate repair mechanisms In any case the complexity of the task can easily grow by an order of magnitude or even more Incrementality is an almost useless feature as long as it remains a local property of individual system components The advantages of incremental processing can be effective only if all the components of a producer consumer chain consistently adhere to the same pattern of temporal behavior

AI Magazine, 1995 **Computational Linguistics and Talking Robots** Roland Hausser, 2011-08-19 The practical task of building a talking robot requires a theory of how natural language communication works Conversely the best way to computationally verify a theory of natural language communication is to demonstrate its functioning concretely in the form of a talking robot the epitome of human machine communication To build an actual robot requires hardware that provides appropriate recognition and action interfaces and because such hardware is hard to develop the approach in this book is theoretical the author presents an artificial cognitive agent with language as a software system called database semantics DBS Because a theoretical approach does not have to deal with the technical difficulties of hardware engineering there is no reason to simplify the system instead the software components of DBS aim at completeness of function and of data coverage

in word form recognition syntactic semantic interpretation and inferencing leaving the procedural implementation of elementary concepts for later In this book the author first examines the universals of natural language and explains the Database Semantics approach Then in Part I he examines the following natural language communication issues using external surfaces the cycle of natural language communication memory structure autonomous control and learning In Part II he analyzes the coding of content according to the aspects semantic relations of structure simultaneous amalgamation of content graph theoretical considerations computing perspective in dialogue and computing perspective in text The book ends with a concluding chapter a bibliography and an index The book will be of value to researchers graduate students and engineers in the areas of artificial intelligence and robotics in particular those who deal with natural language processing
