Radiation Research Proceedings Of The Eighth International Congress Of Radiation Research Edinburgh July 1987:

Radiation Health Research, 1986-1990, 1991 This report consists of a collection of 225 abstracts of radiation research sponsored by NASA during the period 1986-1990. Each abstract has been categorized within one of four discipline areas: Physics, Biology, Risk Assessment, and Microgravity. Topic areas within each discipline have been assigned as follows: Physics: Atomic Physics, Nuclear Science, Space Radiation, Radiation Transport and Shielding, and Instrumentation; Biology: Molecular Biology, Cellular Radiation Biology, Tissue, Organs, and Organisms; Radioprotectants and Plants; Risk Assessment; Radiation Health and Epidemiology; Space Flight; Radiation Health Physics; Inter- and Intraspecies Extrapolation; and Radiation Limits and Standards; and Microgravity. When applicable, subareas have been assigned for selected topic areas. Keywords and author indices are provided. *Physical and Chemical Mechanisms in Molecular Radiation Biology* William A. Glass, Matesh N.

Varma, 2012-12-06 The fundamental understanding of the production of biological effects by ionizing radiation may well be one of the most important scientific objectives of mankind; such understanding could lead to the effective and safe utilization of the nuclear energy option. In addition, this knowledge will be of immense value in such diverse fields as radiation therapy and diagnosis and in the space program. To achieve the above-stated objective, the U.S. Department of Energy (DOE) and its predecessors embarked upon a fundamental interdisciplinary research program some 35 years ago. A critical component of this program is the Radiological and Chemical Physics Program (RCPP). When the RCPP was established, there was very little basic knowledge in the fields of physics, chemistry, and biology that could be directly applied to understanding the effects of radiation on biological systems. Progress of the RCPP program in its first 15 years was documented in the proceedings of a conference held at Airlie, Virginia, in 1972. At this conference, it was clear that considerable progress had been made in research on the physical and chemical processes in well-characterized systems that could be used to understand biological effects. During this period of time, most physical knowledge was obtained for the gas phase because the technology and instrumentation had not progressed to the point that measurements could be made in liquids, more characteristic of biological materials.

National Library of Medicine Current Catalog National Library of Medicine (U.S.), *Radiation Oncology: Radiobiological and Physiological Perspectives* H. Awwad, 2013-03-09 During the past four decades, knowledge about biological effects of ionizing radiations on mammalian cells, normal tissues, and tumours has increased enormously and has enabled radiotherapists to obtain a better insight into the advantages and disadvantages of cancer treatments with modified regimens of irradiations and combinations with chemotherapeutic agents. Even for the older scientists and clinicians who have witnessed all these developments and have contributed to the vast amount of information, it is difficult to integrate this knowledge and to apply it in their daily work. For younger workers, it is often difficult to select the important main concepts and results from the overwhelming number of publications. It is evident that a book which provides an integrated view of

basic and applied radiation oncology can be of great value to students scientists and most importantly to clinicians who can devote only part of their time to the task of understanding the radiobiological background of their application of radiation in cancer treatment This book Radiation Oncology is written by a radiotherapist who has for a long time participated in the integration of basic knowledge and clinical experience He has selected radiobiological information which is considered important to radiotherapy and in the description and interpretation of normal tissue tolerance and tumour eradication probability he illustrates how basic knowledge can be applied clinically

Health Effects of Exposure to Low Levels of Ionizing Radiation National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on the Biological Effects of Ionizing Radiation (BEIR V), 1990-02-01 This book reevaluates the health risks of ionizing radiation in light of data that have become available since the 1980 report on this subject was published The data include new much more reliable dose estimates for the A bomb survivors the results of an additional 14 years of follow up of the survivors for cancer mortality recent results of follow up studies of persons irradiated for medical purposes and results of relevant experiments with laboratory animals and cultured cells It analyzes the data in terms of risk estimates for specific organs in relation to dose and time after exposure and compares radiation effects between Japanese and Western populations

Environmental Radiation Effects on Mammals Olga A. Smirnova, 2016-10-14 Dr Smirnova s updated text is devoted to the theoretical studies of radiation effects on mammals It summarizes 35 years of results the author obtained from analyzing dose rate equivalents for the Galactic Cosmic Rays GCR and for Solar Particles Events SPE This edition also includes two new chapters on skin epidermal epithelium and risk assessment for myeloid leukemia as well as extended revisions addressing the radiation effects on the blood forming system Mathematical models are used to explain the effects of both acute and chronic irradiation on the dynamics of vital body systems like the hematopoietic system the development of autoimmune diseases and the mortality dynamics in homogeneous and nonhomogeneous mammalian populations The proposed methodology of these studies the models themselves and the obtained results are of a great theoretical significance and can find wide practical use

isotope production cancer therapy and industrial use to the larger versions giving higher energy beams of ions of various elements for nuclear and particle physics Important topics include ECR ion sources superconducting magnets and radiofrequency cavities beam dynamics and diagnostics beam cooling rings control systems and various medical and industrial applications

Eicosanoids and Other Bioactive Lipids in Cancer and Radiation Injury Kenneth V. Honn, Lawrence J. Marnett, Santosh Nigam, Thomas Walden Jr., 2012-12-06 This volume contains the proceedings of the First International Conference on Eicosanoids and Other Bioactive Lipids in Cancer and Radiation Injury held in Detroit Michigan on October 11 14 1989 The program consisted of 83 oral and 29 poster presentations 74 of which are included in these proceedings The major sponsors of the conference were the Armed Forces Radiobiology Research Institute located in Bethesda Maryland the Radiation Oncology Research and Development Center of the Gershenson Radiation Oncology Center Harper Hospital in Detroit Michigan and Schering AG of West Germany Eighteen other organizations provided additional support The conference was unique in its attempt to link the eicosanoid and lipid researchers in the radiobiology and cancer disciplines The diverse roles that eicosanoids and other bioactive lipids play in these biological phenomena including the participation of lipid oxidation in conversion of procarcinogens positive and negative modulation of tumor growth immunomodulation tissue injury and yet protection and enhancement of cancer therapy necessitated scientific interaction to sort out and understand these complex and sometimes contradictory observations The success of this effort is reflected not only through these proceedings but also through the decision to continue the conference series with a second meeting to be held in Berlin between September 17 21 1991

Multiple Drug Resistance in Cancer Martin Clynes, 2012-12-06 This book is an up to date review of current knowledge in the field of multiple drug resistance in human cancer The literature up to the middle of 1993 is surveyed in specialist chapters written by different experts Topics covered include the molecular genetics cytogenetics and biochemistry of the mdr genes and P glycoprotein alternative transport proteins in MDR topoisomerases I and II cytochrome p450 enzymes and glutathione S transferases in MDR cellular models for MDR in solid tumours and haemopoietic tumours immunochemical and molecular biological techniques for detection of MDR related gene expression and clinical and pharmacological strategies to circumvent resistance The book brings together a new combination of approaches to this serious clinical problem
