Looking for Life, Searching the Solar System Paul Clancy, André Brack, Gerda Horneck, 2005-06-23 Broad ranging book covering life its origins survival and the search for other life in the Solar System [The Search for Life on Other Planets](#) Bruce Jakosky, 1998-10-15 Does life exist on other planets This 1998 book presents the scientific basis for thinking there may be life elsewhere in the Universe It is the first to cover the entire breadth of recent exciting discoveries including the discovery of planets around other stars and the possibility of fossil life in meteorites from Mars Suitable for the general reader this authoritative book avoids technical jargon and is well illustrated throughout It covers all the major topics including the origin and early history of life on Earth the environmental conditions necessary for life to exist the possibility that life might exist elsewhere in our Solar System the occurrence of planets around other stars and their habitability and the possibility of intelligent extraterrestrial life For all those interested in understanding the scientific evidence for and likelihood of extraterrestrial life this is the most comprehensive and readable book to date *The Search for Life Continued* Barrie W. Jones, 2008-09-02 Barrie Jones addresses the question are we alone which is one of the most frequently asked questions by scientists and non scientists alike In *The Search for Life Continued* this question is addressed scientifically and the author is not afraid to include speculation Indeed the author believes beyond reasonable doubt that we are not alone and this belief is based firmly on frontier science of the most imaginative kind The author concentrates on planetary systems beyond our own but starts with life on Earth which is the only life we know to exist and which provides guidance on how best to search for life elsewhere Planets are the most likely abode of life and so we start the quest with the search for planets beyond the Solar System exoplanets The methods of searching are outlined and the nature of hundreds of exoplanetary systems so far discovered described In the near future we expect to discover habitable Earth like planets But are they actually inhabited How could we tell All will be revealed This full color book is written for everybody who wants to stay in close contact with the latest on possible life on other planets **Are We Being Watched?: The Search for Life in the Cosmos** Paul Murdin, 2013-04-01 An engaging exploration with renowned astronomer Paul Murdin of how life emerged on Earth and the possibilities that it exists elsewhere There is no more fascinating question than whether or not we are alone in a vast universe Here Paul Murdin applies the latest scientific discoveries and theories to inquire whether life exists on other planets and if so what forms it might take Could there be somewhere life as advanced as here on Earth or are we more likely to find primitive life forms Or are we the sole living organisms in a desolate and boundless cosmos Professor Murdin invites us to join him in exploring an extraordinary array of evidence to determine if there is life elsewhere in the cosmos He examines the case for life on Mars and Europa and asks whether on Enceladus or Titan we might find the warm little pond that Darwin speculated was where life began here on Earth Describing the cosmic habitats that produce the alien worlds of our solar system and others he examines the chances of finding life and the prospects for successful communication with an

Science, Society, and the Search for Life in the Universe Bruce M. Jakosky, 2022-10-18 Are we alone in the universe As humans are we unique or are we part of a greater cosmic existence What is life's future on Earth and beyond How does life begin and develop These are age old questions that have inspired wonder and controversy ever since the first people looked up into the sky With today's technology however we are closer than ever to finding the answers Astrobiology is the relatively new but fast growing scientific discipline that involves trying to understand the origin evolution and distribution of life within the universe It is also one of the few scientific disciplines that attracts the public's intense curiosity and attention This interest stems largely from the deep personal meaning that the possible existence of extraterrestrial life has for so many Whether this meaning relates to addressing the Big Questions of our existence the possibility of encountering life on other planets or the potential impact on our understanding of religion there is no doubt that the public is firmly vested in finding answers In this broadly accessible introduction to the field Bruce Jakosky looks at the search for life in the universe not only from a scientific perspective but also from a distinctly social one In lucid and engaging prose he addresses topics including the contradiction between the public's fascination and the meager dialogue that exists between those within the scientific community and those outside of it and what has become some of the most impassioned political wrangling ever seen in government science funding
