Gunilla Almered Olsson,Pernille Gooch,2019-04-12 Providing both a theoretical background and practical examples of natural resource conflict this volume explores the pressures on natural resources leading to scarcity and conflict It is shown that the causes and driving forces behind natural resource conflicts are diverse complex and often interlinked including global economic growth exploding consumption poor governance poverty unequal access to resources and power The different interpretations of nature culture and the role of humans in the ecosystem are often at the centre of the conflict Natural resource conflicts range from armed conflicts to conflicts of interest between stakeholders in the North as well as in the South The varying driving forces behind such disputes at different levels and scales are critically analysed and approaches to facilitate and enforce mediation transformation and collaboration at these levels and scales are presented and discussed In order to transform existing resource conflicts as well as to decrease the risk of future conflicts approaches that enhance and enforce collaboration for sustainable development at global regional national and local levels are reviewed and sustainable pathways suggested A range of global examples is presented including water resources fisheries forests human wildlife conflicts urban environments and the consequences of climate change It will be a valuable text for advanced students of natural resource management environment and development studies and peace and conflict management The book will also be of interest to practitioners in the field of natural resource management Natural Resource Management And Sustainable Development In North-East India Nursadh Ali,2007 Papers presented at theNational Seminar on Natural Resources and Tribal Communities in Northeast India held at Pasighat during 7 8 February 2006 **Natural Resources Conservation Law** Sairam Bhat,2010-11-10 This book presents a critical analysis of India s environment pollution and protection scenario following the State Pressure Response framework to analyze the parameters of conservation It advocates that the role of environmental law should not be restricted to mere prevention and control of pollution but should encompass conservation and regeneration of natural resources too The book also reflects on India s management policy regarding resource conservation and highlights the international laws on arbitration in environmental matters It is a one stop reference for all debates and discussions on environment with a global perspective *Climate Change Adaptation, Risk Management and Sustainable Practices in the Himalaya* Sanjeev Sharma,Jagdish Chandra Kuniyal,Pritam Chand,Pardeep Singh,2023-03-10 This volume analyzes ecological and socio economic risks due to climate change in the Himalayan

mountain ecosystems communities and proposes adaptation strategies and sustainability practices In order to better understand the potential actions required to improve natural resource conservation and the development of mountain people s livelihoods The authors discuss the current status of local knowledge system on various environmental aspects of conservation and sustainable use of mountain resources in the Himalaya The book addresses the institutional capacities gaps and priority areas of capacity building to strengthen policies and governance in regard to climate change landuse management biodiversity conservation and sustainable management in the Himalayan region The aim of this book is to enhance coordination building among policymakers planners mountain communities to foster collaboration between different stakeholders by understanding local perceptions of climate change as well as variability issues and establishing adaptation strategies to cope with these impacts The chapters incorporate theoretical and applied aspects and may serve as baseline information for the sustainability of mountain ecosystems through the contribution of multidisciplinary and interdisciplinary expertise from the Himalayan region The book will be useful for students teachers and researchers working in different areas pertaining to mountain ecosystems as well as policymakers and planners working on issues related to the sustainability of the mountain ecosystem Environmental Sustainability from the Himalayas to the Oceans Shikui Dong,Jayanta

Bandyopadhyay,Sanjay Chaturvedi,2017-01-23 The book is written in the backdrop of the environmental impacts of and future requirements from the natural environment for rapid economic growth that has characterized recent economic history of China and India especially over the past few decades The environmental impacts of such rapid economic changes have been more frequently than otherwise degrading in character Environmental impacts of economic activities create degraded natural ecosystems by over utilization of nature s provisioning ecosystem services from Himalaya to the Ocean as well by the use of the natural environment as sink for dumping of unmarketable products or unused inputs of economic activities Such processes affect wide range of ecosystem processes on which the natural environment including human population depend on Critical perspectives cast by various chapters in this book draw attention to the various ways in which space and power interact to produce diverse geographies of sustainability in a globalizing world They also address the questions such as who decides what kind of a spatial arrangement of political power is needed for sustaining the environment Who stands to gain or lose what when where and why from certain geographical areas being demarcated as ecologically unique fragile and vulnerable environments Whose needs and values are being catered to by a given ecosystem service What is the scope for critical inquiry into the ways in which the environment is imagined represented and resisted in both geopolitical struggles and everyday life The book provides insights to both academics from diverse disciplines and policy makers civil society actors interested in mutual exchange of knowledge between China and India *Natural Resource Management* B.W. Pandey (ed. By),2005-01-01 **Impact of Climate Change on Water and Health** Velma I. Grover,2012-12-18 Since the hydrological

cycle is so intricately linked to the climate system any change in climate impacts the water cycle in terms of change in

precipitation patterns melting of snow and ice increased evaporation increased atmospheric water vapor and changes in soil moisture and run off Consequently climate change could result in floods in some areas and droughts in others resulting in varying availability and the quality of water affects the quality of life food security and also health security This book examines the impact of climate change on water as well as health *Wildlife in the Himalayan Foothills* P. Tiwari, Bhagwati Joshi, 1997 **Himalaya: Mountains of Destiny** Suresh Chand Rai, 2025-09-30 This book highlights the different ways of seeing and engaging with the natural world and underscores the need to acknowledge and honour the ways that indigenous peoples have done for generations Mountain regions occupy about one fourth of the Earth's terrestrial surface and they are home to almost one tenth of the global population and offer goods and services to more than half of humanity Consequently they received attention at the highest level during the 1992 United Nations Conference on Environment and Development UNCED in Rio de Janeiro's Earth Summit Mountain environments are crucial to the survival of global ecosystems many of them are experiencing degradation in terms of accelerated soil erosion landslides and rapid loss of habitat and genetic diversity etc Hence proper management of mountain resources and the socio economic development of the people deserves immediate action Unfortunately the capacity of mountain ecosystems to provide continued resources is threatened due to the increasing stress of human impact at the global level in general and the Himalayan region in particular The Himalaya a highly complex and diversified mountain system in terms of bio physical attributes is considered a life support system for millions of people in the uplands and many more in lowland areas of India It acts as a climate regulator for much of Asia and is globally recognized for its sacred spiritual and philosophical values The richness and uniqueness of bio physical and socio cultural diversity and the rich heritage of Indigenous Knowledge and Practices IKP have earned the Himalaya global recognition Being young and geotectonically active this system remains inherently unstable fragile and prone to natural disasters Also the vulnerability of this mountain chain to human induced disturbances is now well established Therefore being a special and sensitive system and more importantly due to its life support values the Himalaya deserve special attention It requires conservation and development interventions in a sustainable manner which do not ignore the imperatives of mountain specificities Thus calls for evolving new paradigms of long term conservation and sustainable development that help restore a complex balance between economic interests and ecological imperatives in the region and country in general Understanding that the Himalaya are important for the Ecological Security of the region there is a need for its conservation in the 21st century The present book proposal has been decided to document the Himalayan priorities to achieve sustainable development goals The book is consisting of four sections which will deal with the different dimensions of the Himalaya The present book is conceptualized with an idea to collect case studies on various aspects and applications of conservation measures to value their knowledge and wisdom and to achieve sustainable development goals SDGs **Himalaya on the Threshold of Change** Vishwambhar Prasad Sati, 2019-04-16

This book provides a unique and comprehensive assessment of the changes that have been taking place in the Himalayas. It describes in detail all the aspects of change both natural and cultural along with their implications and suggests policy measures to help mitigate them. The book is divided into two major sections on natural changes and cultural changes and 11 chapters: an introduction, six addressing changes that concern natural aspects and four exploring cultural changes and presenting the book's conclusions. The content is based on a study conducted using a participatory observation empirical method. Time series data from secondary sources is also included, helping to analyze the various changes. The findings are presented in the form of color graphs, models, maps, photographs, and tables. The book offers a valuable resource for policymakers and will prove equally useful for all other stakeholders, e.g., researchers, students, and development agents.

Sustainable Management of Headwater Resources Libor Jansky, Martin J. Haigh, Haushila Prasad, 2005. Headwaters are the source of freshwater resources, the margins of drainage basins, and the first and zero order basins that surround every catchment. The challenge is to define appropriate self-sustainable management strategies and structures for these lands which meet the needs of the headwater habitat, including its human inhabitants, and the needs of habitats downstream. The contributors to this book strive to anticipate emerging and future problems, to discover integrated solutions to the problems already caused by land degradation, natural hazards, and development processes, and to help develop better land management, environmental protection, and landscape regeneration practices and policies. They also address the many challenges that remain: the concern for effective sharing of local experience in science and technology, community participation, the role of education, effectiveness and limits of current technology, the selection of appropriate policies and goals, modes of effective management, and the sustainability of current activities. *Sustainable Management of Headwater Resources* provides an understanding of current and prior situations and provides scientific analyses of local and regional headwater issues in India and Africa. The authors analyse the current situation through field experiments that provide reliable information on the status of headwater resources in these regions. This book originates from the conference on Sustainable Management of Headwater Resources at the 5th International Conference on Headwaters in Nairobi, Kenya.

Knowledge Systems of Societies for Adaptation and Mitigation of Impacts of Climate Change Sunil Nautiyal, K.S. Rao, Harald Kaechele, K.V. Raju, Ruediger Schaldach, 2013-07-09. Climate change is broadly recognized as a key environmental issue affecting social and ecological systems worldwide. At the Cancun summit of the United Nations Framework Convention on Climate Change's 16th Conference, the parties jointly agreed that the vulnerable groups, particularly in developing countries, and whose livelihood is based on land use practices, are the most common victims, as in most cases their activities are shaped by the climate. Therefore, solving the climate dilemma through mitigation processes and scientific research is an ethical concern. Thus, combining the knowledge systems of the societies and scientific evidences can greatly assist in the creation of coping mechanisms for sustainable development in a situation of changing climate. International Humboldt Kolleg

focusing on knowledge systems of societies and Climate Change was organized at ISEC This event was of unique importance as the year 2011 12 was celebrated as the 60th Anniversary of Diplomatic Relations between India and Germany with the motto Germany and India Infinite Opportunities This volume is the outcome of the papers presented during the IHK 2011 at ISEC India **Sustainable Development of Mountain Environment in India and Canada** Ram Babu Singh,1998
