Radical Constructivism In Mathematics Education:

Radical Constructivism in Mathematics Education E. von Glasersfeld, 1991-06-30 Mathematics is the science of acts without things and through this of things one can define by acts 1 Paul Valéry The essays collected in this volume form a mosaic of theory research and practice directed at the task of spreading mathematical knowledge They address questions raised by the recurrent observation that all too frequently the present ways and means of teaching mathematics generate in the student a lasting aversion against numbers rather than an understanding of the useful and sometimes enchanting things one can do with them Parents teachers and researchers in the field of education are well aware of this dismal situation but their views about what causes the wide spread failure and what steps should be taken to correct it have so far not come anywhere near a practicable consensus The authors of the chapters in this book have all had extensive experience in teaching as well as in educational research They approach the problems they have isolated from their own individual perspectives Yet they share both an overall goal and a specific fundamental conviction that characterized the efforts about which they write here The common goal is to find a better way to teach mathematics The common conviction is that knowledge cannot simply be transferred ready made from parent to child or from teacher to student but has to be actively built up by each learner in his or her own mind *Radical Constructivism in Action* Leslie P. Steffe, Patrick W.

Thompson, 2002-11 Over the last twenty five years Ernst von Glasersfeld has had a tremendous impact on mathematics and science education through his fundamental insights into the nature of knowledge and knowing *Radical Constructivism in Action* is a new volume of papers honouring his work by building on his model of knowing The contributions by leading researchers present constructivism in action tying the authors actions regarding practical problems of mathematics and science education philosophy and sociology to their philosophical constraints giving meaning to constructivism operationally The book begins with a retrospective analogy between radical constructivism's emergence and changes in what is thought of as certain scientific knowledge It aims to increase understanding of constructivism and Glasersfeld's achievement and is vibrant evidence of the continued vitality of research in the constructivism tradition **Radical Constructivism in**

Mathematics Education E. von Glasersfeld, 2014-01-15 **Radical Constructivism ; ...** Glasersfeld, 1995 *RADICAL CONSTRUCTIVISM* Ernst von Glasersfeld, 2013-08-06 First Published in 1995 In the past decade or two the most important theoretical perspective to emerge in mathematics education has been that of constructivism This burst onto the international scene at the controversial Eleventh International Conference on the Psychology of Mathematics Education in Montreal in the summer of 1987 No one there will forget von Glasersfeld's authoritative plenary presentation on radical constructivism and his replies to critics Ironically the conference at which attacks on radical constructivism were perhaps intended to expose fatally its weaknesses served as a platform from which the theory was launched to widespread international acceptance and approbation Radical constructivism is a theory of knowing that provides a pragmatic approach to questions about reality

truth language and human understanding It breaks with the philosophical tradition and proposes a conception of knowledge that focuses on experiential fit rather than metaphysical truth It claims to be a useful approach not the revelation of a timeless world The ten chapters of this book present different facets in an elegantly written and thoroughly argued account of this epistemological position providing a profound analysis of its central concepts

Key Works in Radical Constructivism Ernst von Glasersfeld, 2007-01-01 Key Works on Radical Constructivism brings together a number of essays by Ernst von Glasersfeld that illustrate the application of a radical constructivist way of thinking in the areas of education language theory of knowledge and the analysis of a few concepts that are indispensable in almost everything we think and do Ernst von Glasersfeld's work opens a window on how we know what we know The present work grew out of a desire to make more accessible this line of thought to highlight its originality and consistency and to illustrate its fecundity in the domains of cognition and learning The first three parts of this book contain texts by Glasersfeld that outline the constructivist approach and explicate the frequently drastic reconceptualizations he has suggested Both the last part and the postscript consist of commentaries by Edith Ackermann Jacques Dautels Gérard Fourez Leslie P Steffe and Kenneth Tobin scholars in the fields that Glasersfeld has been concerned with They examine a number of critical aspects pertaining to radical constructivism's current and future development often tracing out paths that warrant further exploration and reflection in particular concerning the sociopolitical dimension of knowledge Key Works on Radical Constructivism is intended as a reference book for researchers educators and students of education and for anyone interested in grasping or deepening their grasp of radical constructivism's tenets ambitions and concerns Readers will discover in this collection of firsthand contributions the contours of a bold contemporary debate about a most compelling current of thought
