Simons,2012-09-19 A well written history of a history changing aircraft the bomber that carried the two atomic bombs that destroyed Hiroshima and Nagasaki in WWII Aeromilitaria The Boeing B 29 Superfortress was a four engined heavy bomber flown primarily by the United States in World War Two and the Korean War The name Superfortress was derived from that of its well known predecessor the B 17 Flying Fortress The B 29 was the progenitor of a series of Boeing built bombers reconnaissance aircraft trainers and tankers including the variant B 50 Superfortress The B 29 was one of the largest aircraft to see service during World War Two A very advanced bomber for its time it included features such as pressurized cabins an electronic fire control system and remote controlled machine gun turrets Though it was designed as a high altitude daytime bomber in practice it actually flew more low altitude nighttime incendiary bombing missions It was the primary aircraft in the American firebombing campaign against Japan in the final months of World War Two Unlike many other World War Two era bombers the B 29 remained in service long after the war ended with a few even being employed as flying television transmitters The type was finally retired in the early 1960s with 3 960 aircraft in all built Without doubt there is a clear strong requirement to put the record straight using primary source documentation to record the undoubted achievements alongside and in context with the shortcomings to the type s design and operation that have otherwise received scant attention The book covers all variants and is profusely illustrated
