Low-calorie Sweeteners and Weight Control: what the Science Tells Us Sibylle Kranz, 2012 Low-Calorie Foods and Food Ingredients R. Khan, 2012-12-06 amounts can produce a deleterious effect on animals In an attempt to quantify this potential for toxicity and to give sufficient margin for safety JECFA has introduced an acceptable daily intake ADI level for food additives For example the ADI values granted for saccharin aspartame cyclamate acesulfame K and sucralose are 2.5, 40, 11.9 and 1.35 mg/kg body weight per day respectively Chapter 2 on regulatory aspects of low calorie food elaborates these points The additives that are to be consumed in large amounts such as a fat replacement product like Olestra or a new bulking material like polydextrose present a more complex problem as far as the evaluation of their toxicity is concerned Normal safety testing of an additive such as a high intensity sweetener requires that the test animals are fed with a

sufficiently high dosage in order to produce an effect and then on that basis an ADI value is calculated In cases like Olestra and polydex trose which are not normally present in diet or metabolised to dietary constituents such an approach will obviously not be applicable or of any use in calculating an ADI value Due to these factors the regulatory authorities have not yet been able to produce any guidelines for toxicity trials for additives that are to be taken in food in large quantities

Grenby,2012-12-06 The subject of sweeteners continues to advance and expand but the progress that is being made may not be apparent for all to see owing to changes that have been taking place in how research is funded and the locations where it is now mainly done In former times scientific advancement was rated as a prized part of the output of academic research laboratories and institutions

Today however it is increasingly likely that major advances emanate chiefly from the research and development units of industrial and commercial enterprises and organisations. This means of course that the work becomes more focused on achieving specific marketing objectives but because of the high level of commitment cost and dedicated input required publication of the findings tends to take a lower priority and may actually be barred if there is any risk of loss of the commercial edge or advantage which has been one of the targets of the research. Thus one of the objects of preparing this book has been to collect together information that might otherwise remain unpublished on advances in the field of sweeteners. Of the fifteen contributions which form the chapters only 13% originate from academic departments whereas in earlier books of reviews on similar topics contributions from academic sources accounted for as much as 50%. Developments in Sweeteners vols 2 and 3 1987 and 1989 and 64% Progress in Sweeteners 1989.
