Clathrochelates Y.Z. Voloshin,N.A. Kostromina,R.K. Krämer,2002-09-19 Clathrochelates are compounds which contain a metal ion encapsulated within a three dimensional cage of macrobicyclic ligand atoms Within this cage the metal has unique properties and is to a great extent isolated from environmental factors Such complexes are suitable as models of the most essential biological systems membrane transport electron carriers highly selective and sensitive analytical reagents catalysts for photochemical and redox processes cation and anion receptors etc The aim of this monograph is to generalize and

analyze experimental and theoretical data on clathrochelates in order to promote further research in this promising field of chemistry Chapter 1 gives general concepts of complexes with encapsulated metal ions discusses basic specific features of these compounds considers and characterizes the main types of compounds with encapsulated metal ions and the main classes of clathrochelates and includes the current nomenclature Chapter 2 deals with the pathways of clathrochelate synthesis and the general procedures for the synthesis of macrobicyclic tris dioximates phosphorus containing tris diimines sepulchrates sarcophagi nates and polyene and other types of clathrochelate complexes Chapter 3 concerns studies of the electronic and spatial structure of clathrochelate complexes In Chapter 4 the kinetics and mechanism of synthesis and decomposition reactions of macrobicyclic tris dioximates sarcophaginates and sepulchrates in solution and gas phases are discussed Chapter 5 considers the electrochemical photochemical and some other characteristics of clathrochelates and their applications associated with these characteristics Finally the practical applications of the unique properties of clathrochelates and perspectives on the synthesis of new clathrochelates are described in Chapters 6 and 7 respectively

Polyarenes II Jay S. Siegel,Yao-Ting Wu,2014-11-25 Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual concentrating on the methodological thinking that will allow the non specialist reader to understand the information presented Contributions also offer an outlook on potential future developments in the field *Comprehensive Supramolecular Chemistry II* George W. Gokel,Len Barbour,2017-06-22 Comprehensive Supramolecular Chemistry II Second Edition Nine Volume Set is a one stop shop that covers supramolecular chemistry a field that originated from the work of researchers in organic inorganic and physical chemistry with some biological influence The original edition was structured to reflect in part the origin of the field However in the past two decades the field has changed a great deal as reflected in this new work that covers the general principles of supramolecular chemistry and molecular recognition experimental and computational methods in supramolecular chemistry supramolecular receptors dynamic supramolecular chemistry supramolecular engineering crystallographic engineered assemblies sensors imaging agents devices and the latest in nanotechnology Each section begins with an introduction by an expert in the field who offers an initial perspective on the development of the field Each article begins with outlining basic concepts before moving on to more advanced material Contains content that begins with the basics before moving on to more complex concepts making it suitable for advanced undergraduates as well as academic researchers Focuses on application of the theory in practice with particular focus on areas that have gained increasing importance in the 21st century including nanomedicine nanotechnology and medicinal chemistry Fully rewritten to make a completely up to date reference work that

sensor applications deriving from the specific signal delivered by the analyte probe interaction Indeed if calcium sensing in real time for biological purposes is actually possible owing to the emergence of efficient fluorescent receptors other elements can also be specifically detected identified and finally titrated using tailored chemosensors Pollutants such as heavy metals or radionuclides are among the main targets since their detection and removal could be envisioned at very low concentrations with in addition sensors displaying specific and strong complexing abilities Besides various species of biological interest or others the list is large including sugars and other miscellaneous molecules such as oxygen and carbon dioxide can be actually probed with optodes and similar devices The present volume in which the key lectures of the workshop are collected gives a survey of the main developments in the field The success of the workshop mainly came from the high quality of the lectures the invited short talks the two posters sessions and the many very lively discussions which without doubt will produce positive outcomes

Supramolecular Catalysis Piet W. N. M. van Leeuwen,2008-06-25 In the past few years supramolecular chemistry has led to new approaches in homogeneous catalysis While host guest chemistry had already found applications in catalysis as a result of the pioneering work carried out by Professor Ronald Breslow and Nobel prizewinner Professor Jean Marie Lehn that began some 40 years ago the construction of catalysts by supramolecular forces has only recently become a powerful tool This development paves the way for large numbers of new potential catalysts that can be varied in an expedient way by changing the constituting building blocks Written by some of the leading contributors in the field this book is intended for both industrial and academic chemists with an interest in this area of catalysis With its discussion of topics from ligand libraries to chirality directed self assembly this is a must have for chemists with organic catalytic and polymer backgrounds as well as those employing such compounds in industrial processes
