**Macroscopic Quantum Coherence - Proceedings Of The International Conference** Yogendra Srivastava,E Sassaroli,John Swain,Allan Widom,1998-12-31 As the end of the nineteenth century neared it was clear to many in the physics community that if only Newton s equations plus Maxwell s equations could be solved adequately there would really be nothing very new in physics on a fundamental level Then came relativity and quantum mechanics As we now approach the end of the twentieth century it is clear to many in the physics community that if one could adequately solve somebody s gauge field theory or somebody else s string model then nothing fundamentally new would ever again enter into physics To others in the physics community it is somewhat doubtful that our present physical understanding of the world especially of quantum mechanics has reached such a pinnacle This conference was organized to discuss the present state of affairs in our knowledge both experimental and theoretical of the basic tenets of quantum mechanics Many fields of physics in which quantum mechanics plays a central role were included i atomic and molecular beams ii photon beams iii atomic interference in atom surface physics and atom wire physics iv Bose condensed systems v quantum 1 f noise vi quantum electrodynamics effects in water colloidal systems and

biological systems vii quantum interference in neutrino physics viii periodic in time driven quantum systems ix  
superconducting quantum circuits and x quantum computer circuit elements The large variety of different topics all of  
current importance allowed for various viewpoints that are usually not present when conferences devoted to narrower topics  
are held The cross fertilization of ideas was greatly appreciated by the participants and will be of equal interest to the reader

**New Directions  
in Mesoscopic Physics (Towards Nanoscience)** R. Fazio, V.F. Gantmakher, Y. Imry, 2012-12-06 An introduction and

comprehensive survey of the main issues in mesoscopic physics Topics covered include quantum Hall effects transport through quantum wires and dots coherence in mesoscopic systems spintronics disordered systems and solid state quantum computation Some contributions are dedicated to the connections between nanoscience and biophysics and quantum optics Although the topics mentioned have many aspects in common they span a wide area of physics It is therefore especially important to provide a broad view of this rapidly expanding field Thanks to the excellent presentations the book will be found suitable both for young researchers who want to enter the field and stimulating for more experienced scientists

**Exotic States in Quantum Nanostructures** Sarben Sarkar, 2013-11-11 Mesoscopic physics has made great strides in the last few years It is an area of research that is attractive to many graduate students of theoretical condensed matter physics The techniques that are needed to understand it go beyond the conventional perturbative approaches that still form the bulk of the graduate lectures that are given to students Even when the non perturbative techniques are presented they often are presented within an abstract context It is important to have lectures given by experts in the field which present both theory and experiment in an illuminating and inspiring way so that the impact of new methodology on novel physics is clear It is an apt time to have such a volume since the field has reached a level of maturity The pedagogical nature of the articles and the variety of topics makes it an important resource for newcomers to the field The topics range from the newly emerging area of quantum computers and quantum information using Josephson junctions to the formal mathematical methods of conformal field theory which are applied to the understanding of Luttinger liquids Electrons which interact strongly can give rise to non trivial ground states such as superconductivity quantum Hall states and magnetism Both their theory and application are discussed in a pedagogical way for quantum information in mesoscopic superconducting devices skyrmions and magnetism in two dimensional electron gases transport in quantum wires metal insulator transitions and spin electronics

**“Progress in Physics,” vol. 21, no. 1, 2025** Dmitri Rabounski, Pierre Millette, Andreas Ries, Florentin Smarandache, Larissa Borissova, Ebenezer Chifu, This issue of Progress in Physics features a collection of articles on theoretical and experimental physics as well as related topics in mathematics The main theme appears to be a re evaluation of fundamental concepts in physics with several papers discussing alternatives to established theories One article proposes correct solutions for rotating and charged black holes suggesting they have an oblate spheroid shape rather than being perfectly spherical Another paper presents a new cosmology framework based on a Krogh gravity theory that predicts the Hubble redshift curve without needing concepts like dark energy or expansion Other topics include an analysis of fundamental forces from numerical relations a re examination of quantum mechanics in the microworld and the feasibility of non quantum teleportation

Kivshar, 2014-11-01 Metamaterials artificial electromagnetic media achieved by structuring on the subwave length scale were initially suggested for the negative index and superlensing They became a paradigm for engineering electromagnetic space and controlling propagation

of waves The research agenda is now shifting on achieving tuneable switchable nonlinear and sensing functionalities The time has come to talk about the emerging research field of metadevices employing active and tunable metamaterials with unique functionalities achieved by structuring of functional matter on the subwave length scale This book presents the first systematic and comprehensive summary of the reviews written by the pioneers and top class experts in the field of metamaterials It addresses many grand challenges of the cutting edge research for creating smaller and more efficient photonic structures and devices

**Three Novel Approaches to Deep Space: Interstellar Travel that Transcend the Limitations Imposed by the Rocket Equation** Victor Christianto, Florentin Smarandache , At the time of writing this abstract we read about Betelgeuse star has exploded in the last few days While there are various explanations and interpretations on how that event would have impacted this Earth s inhabitants our interpretation asserts that there are several chains of stars that act to lock this Earth to the 3D realm and the exploded Betelgeuse star can be considered as a signal from heaven that we all Earth inhabitants are allowed to be elevated to 5D consciousness and to explore the Deep Space beyond this solar system Therefore in the present paper it is considered three novel approaches to Deep Space interstellar travel that transcend the limitations imposed by the Tsiolkovsky rocket equation Among other things we explore the possibility of utilizing macro quantum tunneling as an alternative propulsion method By inducing a state of quantum coherence in a macroscopic object it is theorized that it could tunnel through barriers bypassing the need for conventional propulsion systems Furthermore we investigate the potential role of spin supercurrents in facilitating this process The paper delves into the theoretical underpinnings of macroquantum tunneling and spin supercurrents discussing the challenges and opportunities associated with their application to space travel
