Research in Verbal Behavior and Some Neurophysiological Implications Kurt Salzinger, Suzanne

Salzinger, 2013-10-22 Research in Verbal Behavior and Some Neurophysiological Implications focuses on varied approaches to the study of language including verbal behavior in animals mimicry linguistics and verbal satiation The selection first offers information on verbal behavior in animals and dolphin s vocal mimicry as a unique ability and a way toward understanding The book also ponders on the problem of response class in verbal behavior and verbal operant conditioning and awareness Discussions focus on state of the organism as a determinant of response class topography of response common stimulus and common effect The publication takes a look at a behavioral basis for the polarity principle in linguistics acquisition of grammar by children and interdependencies of the bilingual s two languages The manuscript also elaborates on verbal satiation and exploration of meaning relations and grammatical indicants of speaking style in normal and aphasic speakers The selection is highly recommended for readers wanting to study verbal behavior New Developments in

Behavioral Research: Theory, Method and Application Barbara C. Etzel, Judith M. LeBlanc, Donald M. Baer, 2020-09-10 Originally published in 1977 these examples of research and scholarly argument were collected in honor of Professor Sidney W Bijou In the language of academics they constitute a Festschrift a festival of scholarly writing performed to celebrate the career of a person who produced and stimulated others to produce exactly such contributions throughout a long valuable and productive professional history Since 1955 Dr Bijou had worked almost exclusively within the approach variously labelled as the functional analysis of behavior the experimental analysis of behavior operant conditioning or Skinnerian psychology From his point of view it seems clear the first of these labels was the correct one It was the principle of objective direct observable analysis that attracted him **New Autism Research Developments** Barbara S. Mesmere, 2007 This book presents the

latest research in the battle against autism According to numerous news reports the increase in special needs children has reached epidemic proportions Autism is a complex developmental disability that typically appears during the first three years of life The result of a neurological disorder that affects the functioning of the brain autism and its associated behaviours have been estimated to occur in as many as 2 to 6 in 1 000 individuals Autism is four times more prevalent in boys than girls and knows no racial ethnic or social boundaries Autism is a spectrum disorder The symptoms and characteristics of autism can present themselves in a wide variety of combinations from mild to severe Although autism is defined by a certain set of behaviours children and adults can exhibit any combination of the behaviours in any degree of severity People with autism process and respond to information in unique ways In some cases aggressive and or self injurious behaviour may be present

Psycholinguistic Research (PLE: Psycholinguistics) Doris Aaronson, Robert Rieber, 2013-11-20 Originally published in 1979 this book represents an effort to bring together the two disciplines at the core of psycholinguistics psychology and linguistics It discusses a broad variety of theoretical approaches to psycholinguistics as well as covering a wide range of

topics At the time the book had four goals to discuss many of the important contemporary issues in psycholinguistics to explore the different views on major theoretical controversies to provide an analysis of background literature as a framework in which to evaluate the issues and controversies and to describe interesting high quality research currently being done by the authors and some of their colleagues Today it can be read and enjoyed in its historical context with many of the chapters still relevant in psycholinguistic research today

New Methods in Reading Comprehension Research David E. Kieras,Marcel A. Just,2018-04-17 Published in 1984 this volume presents methodologies for studying the ongoing psychological processes that occur as a person reads a text as well as discussing the major findings that these methodologies have produced to provide a handbook of reading comprehension research techniques Focusing on the comprehension processes that occur when a person is reading rather than the representation that remains after the text has been read the methodologies use measures such as reading times that reflect ongoing processes rather than relying exclusively on conventional measures of memory performance such as recall These methods make use of computer technology for rapid and flexible stimulus representation and data acquisition This book will allow researchers and students to select appropriate methodologies to investigate a range of fascinating questions about reading comprehension

Verbal Behavior Burrhus Frederic Skinner,1957 Book in which Skinner inspects human behavior describing linguistics

A Cognitive Theory of Learning Marvin Levine,2022-11-01 First published in 1975 A Cognitive Theory of Learning provides a history of hypothesis theory H theory along with the author s research from the previous decade The first part introduces the reader to contributions of some major learning theorists It traces the history of H theory reviewing the confrontation with conditioning theory with the stress on the emergence of H theory which came to

predominate The second part describes the author's work presented as it emerged over time It shows how the outcome of one experiment typically led to the next theoretical development or experiment Originally part of The Experimental Psychology Series this reissue can now be read and enjoyed again in its historical context Research in Psychotherapy John M. Shlien, 1968 **Foreign Language, Area, and Other International Studies** John P. Brosseau, 1980 Dynamic systems theory and embodiment in psychotherapy research. A new look at process and outcome Sergio Salvatore, Wolfgang Tschacher, Omar Carlo Gioacchino Gelo, Sabine C Koch, 2016-04-11 In an attempt to cease from reducing the world and its emergent phenomena to linear modeling and analytic dissection Dynamic Systems Theories DST and Embodiment theories and methods aim at accounting for the complex dynamic and non linear phenomena that we constantly deal with in psychology For instance DST and Embodiment can enrich psychology's understanding of the communicative process both in clinical and non clinical settings In psychotherapy an important amount of research has shown that next to other ingredients the therapeutic relationship is the most important active factor contributing to psychotherapy outcome These findings give communication a central role in the psychotherapy process In the traditional view the underlying model of understanding psychotherapy processes is that of a number of components summatively coming together enabling us to make a linear causal prediction Yet communication is inherently dynamic A shift to viewing the communication process in psychotherapy as a field dynamic phenomenon helps us to take into account nonlinear phenomena such as feedback processes within and between persons We thus propose an embodied enactive dynamic systems view as a new theoretical and methodological perspective that can more realistically capture what happens among and between two persons in psychotherapy This view reaches beyond the current narrow model of psychotherapy research DST and Embodied Enactive Approaches can offer solutions to the loss of non linear phenomena the complex dynamics of reality and the holistic level of analysis DST and Embodied Enactive Approaches have developed not in a single discipline but in a joined movement based on various fields such as physics biology robotics anthropology philosophy linguistics neuroscience and psychology and have only recently entered clinical theorizing The two new paradigms have already triggered a rethinking of the therapeutic exchange by recognizing the embodied nature of psychological and communicative phenomena Their integration opens up a promising scenario in the field of psychotherapy research developing new profoundly transdisciplinary theoretical concepts methodologies and standards of knowledge The notion of field dynamics enables us to account for the role of the communicational context in the regulation of intra psychological processes while at the same time avoiding the pitfalls of an ontologization of the hierarchy of systemic organization Moreover the new approach implements methodological strategies that can transcend the conventional opposition between idiographic and nomothetic sciences
