differential equations one has the Riemann Hilbert problem the Stokes phenomena and the hypergeometric functions with their multidimensional generalizations In the theory of homomorphic foliations there appear the Ecalle Voronin Martinet Ramis moduli Moreover there is a deep connection of monodromy theory with Galois theory of differential equations and algebraic functions The material is addressed to a wide audience ranging from specialists in the theory of ordinary differential equations to algebraic geometers Readers will quickly get introduced to modern and vital mathematical theories such as singularity theory analytic theory of ordinary differential equations holomorphic foliations Galois theory and parts of algebraic geometry without searching in vast literature This second edition has been enlarged by several sections presenting new results appeared since the first edition     Station Bulletin Oregon State University.
