Low-level Radioactive Waste Edward L. Gershey, 1990 TECHNICAL *Decision-making and Radioactive Waste Disposal* Andrew Newman, Gerry Nagtzaam, 2015-11-19 The International Atomic Energy Agency estimates that nuclear power generation facilities produce about 200 000 cubic meters of low and intermediate level waste each year Vital medical procedures industrial processes and basic science research also produce significant quantities of waste All of this waste must be shielded from the population for extended periods of time Finding suitable locations for disposal facilities is beset by two main problems community responses to siting proposals are generally antagonistic and as a result governments have tended to be reactive in their policy making Decision making and Radioactive Waste Disposal explores these issues utilizing a linear narrative case study approach that critically examines key stakeholder interactions in order to explain how siting decisions for low level waste disposal are made Five countries are featured the US Australia Spain South Korea and Switzerland This book seeks to establish an understanding of the political economic environmental legal and social dimensions of siting across those countries This valuable resource fills a gap in the literature and provides recommendations for future disposal facility siting efforts The book will be of interest to students and scholars of environmental law justice management politics energy and security policy as well as decision makers in government and industry **The 1996 Baseline Environmental**

Not Here, Not There, Not Anywhere Daniel J. Sherman, 2012-06-25 In 1979 provoked by the Three Mile Island nuclear accident governors of states hosting disposal facilities for low level radioactive waste LLRW refused to accept additional shipments The resulting shortage of disposal sites for wastes spurred Congress to devolve responsibility for establishing new geographically diffuse LLRW disposal sites to states and regional compacts with siting authorities often employing socio economic and political data to target communities that would give little resistance to their plans The communities however were far from compliant organizing nearly 1000 opposition events that ended up blocking the implementation of any new disposal sites Sherman provides comprehensive coverage of this opposition testing hypotheses regarding movement mobilization and opposition strategy by analyzing the frequency and disruptive qualities of activism In the process he bridges applied policy questions about hazardous waste disposal with broader questions about the dynamics of social movements and the intergovernmental politics of policy implementation The issues raised in this book are sure to be renewed as interest grows in nuclear power and the disposal of the resulting waste remains uncertain
