*Macroeconomic Theory* James H. Gapinski, 1982

**Macroeconomics Theory** James H. Gatinski, 1995

*Developments of Control Theory for Economic Analysis* Carlo Carraro, D. Sartore, 2012-12-06 Giovanni Castellani Rector of the University of Venice This book contains the Proceedings of the Conference on Economic Policy and Control Theory which was held at the University of Venice Italy on 27 January 1 February 1985 The goal of the Conference was to survey the main developments of control theory in economics by emphasizing particularly new achievements in the analysis of dynamic economic models by control methods The development of control theory is strictly related to the development of science and technology in the last forty years Control theory was indeed applied mainly in engineering and only in the sixties economists started using control methods for analyzing economic problems even if some preliminary economic applications of calculus of variations from which control theory was then developed date back to the twenties Applications of control theory in economics also had to solve new complicated problems like those encountered in optimal growth models or like the determination of the appropriate intertemporal social welfare function of the policy horizon and the relative final state of the system of the appropriate discount factor Furthermore the uncertainty characterizing economic models had to be taken into account thus giving rise to the development of stochastic control theory in economics

Michl, 2015-02-12

A look at all the key topics in intermediate level macroeconomic theory with carefully chosen linear versions of the standard models of both the closed and the open economy It requires no mathematical proficiency beyond high school level algebra and has been thoroughly tested in the classroom      **The Economics of Saving** James H. Gapinski, 2013-03-09 This book began when a letter reached my desk in November 1989 Written by Warren Samuels professor of economics at Michigan State University and editor for Kluwer Academic Publishers the letter reviewed the philosophy behind Kluwer's series on recent economic thought and accordingly expressed interest in the controversies that surround contemporary topics in the discipline It graciously went on to invite me to organize consonant with that philosophy a volume of chapters on saving Soon thereafter I learned that the chapters were to be original compositions I also learned that I would have substantial flexibility in structuring the volume and in recruiting contributors who logically would be authorities in the field Succinctly Samuels was inviting me to work with leading scholars in exploring the current controversies in saving one of my favorite subjects That invitation was simply too tempting to refuse Preparation of the book's outline went smoothly It was obvious that the statistics of saving should be covered along with the theories of saving It was equally obvious that special issues must be addressed Ricardian Equivalence supply side doctrine and economic development among others These themes should be handled so as to bring out the ideological tensions in the profession and that criterion helped to shape the list of potential contributors That is both sides of a conflict should be represented and both should be given the same treatment

**System-Theoretic Methods in Economic Modelling II** S. Mittnik, 2014-06-28 System Theoretic Methods in Economic Modelling II complements the editor's earlier volume bringing together current research efforts integrating system theoretic concepts with economic modelling processes The range of papers presented here goes beyond the long accepted control theoretic contributions in dynamic optimization and focuses on system theoretic methods in the construction as well as the application stages of economic modelling This volume initiates new and intensifies existing debate between researchers and practitioners within and across the disciplines involved with the objective of encouraging interdisciplinary research The papers are split into four sections estimation filtering and smoothing problems in the context of state space modelling applying the state space concept to financial modelling modelling rational expectation and a miscellaneous section including a follow up case study by Tse and Khilnani on their integrated system model for a fishery management process which featured in the first volume

*Macroeconomic Theory and Stabilization Policy* John Mathew Culbertson, 1968

*Dynamic Macroeconomics* George Alogoskoufis, 2019-12-17 An advanced treatment of modern macroeconomics presented through a sequence of dynamic equilibrium models with discussion of the implications for monetary and fiscal policy This textbook offers an advanced treatment of modern macroeconomics presented through a sequence of dynamic general equilibrium models based on intertemporal optimization on the part of economic agents The book treats macroeconomics as applied and policy oriented general equilibrium analysis examining a number of models each of which is suitable for investigating specific issues but may be unsuitable for others After presenting a brief survey of the evolution of macroeconomics and the key facts about long run economic growth and aggregate fluctuations the book introduces the main elements of the intertemporal approach through a series of two period competitive general equilibrium models the simplest possible intertemporal models This sets the stage for the remainder of the book which presents models of economic growth aggregate fluctuations and monetary and fiscal policy The text focuses on a full analysis of a limited number of key intertemporal models which are stripped down to essentials so that students can focus on the dynamic properties of the models Exercises encourage students to try their hands at solving versions of the dynamic models that define modern macroeconomics Appendixes review the main mathematical techniques needed to analyze optimizing dynamic

macroeconomic models The book is suitable for advanced undergraduate and graduate students who have some knowledge of economic theory and mathematics for economists

**Macroeconomic Dynamics** Stephen J. Turnovsky,1997 International Macroeconomic Dynamics provides extensive applications of important macroeconomic dynamic models to the international economy For a long time the study of macroeconomics has focused almost exclusively on a closed economy and downplayed the role of international transactions Today however researchers recognize that one cannot fully understand domestic macroeconomic relationships without considering the global economy within which each country operates Increasingly economists are treating international transactions as an integral part of the macroeconomic system and international macroeconomics has become an area of intensive research activity International Macroeconomic Dynamics provides extensive applications of important macroeconomic dynamic models to the international economy It adopts the main contemporary macroeconomic framework the representative agent model and develops a series of models of increasing complexity The author considers both small and large economies and analyzes them in both deterministic and stochastic contexts The emphasis is very much on the development of the analytical models a novel feature is the extensive use of continuous time stochastic methods While the author applies the models to a range of important policy issues particularly issues of fiscal policy the reader is invited to view the analyses as blueprints for other applications

**Observers and Macroeconomic Systems** Ric D. Herbert,2012-12-06

Observers and Macroeconomic Systems is concerned with the computational aspects of using a control theoretic approach to the analysis of dynamic macroeconomic systems The focus is on using a separate model for the development of the control policies In particular it uses the observer based approach whereby the separate model learns to behave in a similar manner to the economic system through output injections The book shows how this approach can be used to learn the forward looking behaviour of economic actors which is a distinguishing feature of dynamic macroeconomic models It also shows how it can be used in conjunction with low order models to undertake policy analysis with a large practical econometric model This overcomes some of the computational problems arising from using just the large econometric models to compute optimal policy trajectories The work also develops visual simulation software tools that can be used for policy analysis with dynamic macroeconomic systems

**A Macroeconomics Reader** Brian Snowdon,Howard Vane,1997-07-10 A

Macroeconomics Reader brings together a collection of key readings in modern macroeconomics Each article has been carefully chosen to provide the reader with accessible non technical and reflective papers which critically assess important areas and current controversies within modern macroeconomics The book is divided into six parts each with

**Keynesian, Sraffian, Computable and Dynamic Economics** Kumaraswamy Velupillai,2021-03-08 This book explores an alternative approach to the conventional market based view of economic theory and economic policy at theoretical numerical and

applicable levels The chapters provide a theoretical empirical and algorithmic approach to macrodynamics Sraffian economics and current policy issues Post Keynesian macroeconomics business cycle theory the trade cycle microfoundations and the Philips Machine are also covered This book aims to challenge orthodox ideas and provide a lens through which to honour the work of Stefano Zambelli It will be of relevant to students and academics interested in economics Methods of Macroeconomic Dynamics Stephen J. Turnovsky, 2000 Just as macroeconomic models describe the overall economy within a changing or dynamic framework the models themselves change over time In this text Stephen J Turnovsky reviews in depth several early models as well as a representation of more recent models They include traditional backward looking models linear rational expectations future looking models intertemporal optimization models endogenous growth models and continuous time stochastic models The author uses examples from both closed and open economies Whereas others commonly introduce models in a closed context tacking on a brief discussion of the model in an open economy Turnovsky integrates the two perspectives throughout to reflect the increasingly international outlook of the field This new edition has been extensively revised It contains a new chapter on optimal monetary and fiscal policy and the coverage of growth theory has been expanded substantially The range of growth models considered has been extended with particular attention devoted to transitional dynamics and nonscale growth The book includes cutting edge research and unpublished data including much of the author s own work **Equilibrium, Markets and Dynamics** Cars H. Hommes, Roald Ramer, Cees A.

Withagen, 2012-12-06 This book contains essays in honour of Claus Weddepohl who after 22 years is retiring as professor of mathematical economics at the Department of Quantitative Economics of the University of Amsterdam Claus Weddepohl may be viewed as th first Dutch mathematical economist in the general equilibrium tradition of Arrow Debreu and Hahn The essays in this book are centered around the themes Equilibrium Markets and Dynamics that have been at the heart of Weddepohl s work on mathematical economics for more than three decades The essays have been classified according to these three themes Admittedly such a classification always is somewhat arbitrary and most essays would in fact fit into two or even all three themes The essays have been written by international as well as Dutch friends and colleagues including Weddepohl s former Ph D students The book starts with a review of Claus Weddepohl s work by Roald Ramer who has been working with him in Amsterdam for all those years The review describes how Weddepohl became fascinated by general equilibrium theory in the early stages of his career how he has been working on the theory of markets throughout his career and how he turned to applications of nonlinear dynamics to price adjustment processes in a later stage of his career The first part of the book Equilibrium collects essays with general equilibrium theory as the main theme *Dynamic Economics* Gregory C. Chow, 1997-02-13 This work provides a unified and simple treatment of dynamic economics using dynamic optimization as the main theme and the method of Lagrange multipliers to solve dynamic economic problems The author presents the optimization framework for dynamic economics in order that readers can understand the approach and use it as

they see fit Instead of using dynamic programming the author chooses instead to use the method of Lagrange multipliers in the analysis of dynamic optimization because it is easier and more efficient than dynamic programming and allows readers to understand the substance of dynamic economics better The author treats a number of topics in economics including economic growth macroeconomics microeconomics finance and dynamic games The book also teaches by examples using concepts to solve simple problems it then moves to general propositions
