On Applications and Theory of Functional Equations J. Aczel, 1969 **On Applications and Theory of Functional Equations** Janos Aczel, 1980-01-01 **On Applications and Theory of Functional Equations** J. Aczél, 2014-05-12

On Applications and Theory of Functional Equations focuses on the principles and advancement of numerical approaches used in functional equations. The publication first offers information on the history of functional equations, noting that the research on functional equations originated in problems related to applied mathematics. The text also highlights the influence of J d'Alembert, S D Poisson, E Picard, and A L Cauchy in promoting the processes of numerical analyses involving functional equations. The role of vectors in solving functional equations is also noted. The book ponders on the international Fifth Annual Meeting on Functional Equations held in Waterloo, Ontario, Canada, on April 24-30, 1967. The meeting gathered participants from America, Asia, Australia, and Europe. One of the topics presented at the meeting focuses on the survey of materials dealing with the progress of approaches in the processes and methodologies involved in solving problems dealing with functional equations. The influence, works, and contributions of A L Cauchy, G Darboux, and G S Young to the field are also underscored. The publication is a valuable reference for readers interested in functional equations.

Functional Equations: History, Applications and Theory J. Aczél, 2001-11-30

Approach your problems from the end and begin with the solution. It is that they the answers. Then one day you can't see the problem perhaps you will find the G K Chesterton The Scandal of final question Father Brown The Point of a Pin The Hermit Clad n Crane Feathers in R van Gulik s The Chinese Haze Murders. Growing specialization and diversification have brought a host of monographs and textbooks on increasingly specialized topics. However, the tree of knowledge of mathematics and related fields does not grow only by putting forth new branches. It also happens quite often in fact that branches which were thought to be completely disparate are suddenly seen to be related. Further, the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years: measure theory is used non trivially n regional and theoretical economics; algebraic geometry interacts with physics; the Minkowsky lemma, coding theory and the structure of water meet one another in packing and covering theory; quantum fields, crystal defects and mathematical programming profit from homotopy theory; Lie algebras are relevant to filtering and prediction; and electrical engineering can use Stein spaces. And in addition to this there are such new emerging subdisciplines as completely integrable systems, chaos, synergetics, and large scale order which are almost impossible to fit into the existing classification schemes. They draw upon widely different sections of mathematics.

An Introduction to the Theory of Functional Equations and Inequalities Marek Kuczma, 2009-03-12 Marek Kuczma was born in 1935 in Katowice Poland and died there in 1991 After finishing high school in his home town he studied at the Jagiellonian University in Krak w He defended his doctoral dissertation under the supervision of Stanislaw Golab In the year of his habilitation in 1963 he obtained a position at the Katowice branch of the

Jagiellonian University now University of Silesia Katowice and worked there till his death Besides his several administrative positions and his outstanding teaching activity he accomplished excellent and rich scientific work publishing three monographs and 180 scientific papers He is considered to be the founder of the celebrated Polish school of functional equations and inequalities The second half of the title of this book describes its contents adequately Probably even the most devoted specialist would not have thought that about 300 pages can be written just about the Cauchy equation and on some closely related equations and inequalities And the book is by no means chatty and does not even claim completeness Part I lists the required preliminary knowledge in set and measure theory topology and algebra Part II gives details on solutions of the Cauchy equation and of the Jensen inequality in particular on continuous convex functions Hamel bases on inequalities following from the Jensen inequality Part III deals with related equations and inequalities in particular Pexider Hossz and conditional equations derivations convex functions of higher order subadditive functions and stability theorems It concludes with an excursion into the field of extensions of homomorphisms in general Janos Aczel Mathematical Reviews This book is a real holiday for all the mathematicians independently of their strict speciality One can imagine what deliciousness represents this book for functional equationists B Crstici Zentralblatt f r Mathematik

Operator Approach Anatolij Antonevich, 2012-12-06 In this book we shall study linear functional equations of the form $m \times n$ $U(x) = \sum_{k=1}^n a_k U(x_k) + f(x)$ where U is an unknown function from a given space $F(X)$ of functions on a set X $Q_k: X \rightarrow X$ are given mappings a_k and f are given functions Our approach is based on the investigation of the operators given by the left hand side of equation 1 In what follows such operators will be called functional operators We will pay special attention to the spectral properties of functional operators first of all to invertibility and the Noether property Since the set X the space $F(X)$ the mappings Q_k and the coefficients a_k are arbitrary the class of operators of the form 1 is very rich and some of its individual representatives are related with problems arising in various areas of mathematics and its applications In addition to the classical theory of functional equations among such areas one can indicate the theory of functional differential equations with deviating argument the theory of nonlocal problems for partial differential equations the theory of boundary value problems for the equation of a vibrating string and equations of mixed type a number of problems of the general theory of operator algebras and the theory of dynamical systems the spectral theory of automorphisms of Banach algebras and other problems
