Radar Array Processing Simon Haykin, John Litva, Terence J. Shepherd, 2013-03-08 Radar Array Processing presents modern techniques and methods for processing radar signals received by an array of antenna elements. With the recent rapid growth of the technology of hardware for digital signal processing it is now possible to apply this to radar signals and thus to enlist the full power of sophisticated computational algorithms. Topics covered in detail here include super resolution methods of array signal processing as applied to radar adaptive beam forming for radar and radar imaging. This book will be of interest to researchers and students in the radar community and also in related fields such as sonar, seismology, acoustics and radio astronomy.

Principles of Space-time Adaptive Processing Richard Klemm, 2002. Annotation: This is a systematic introduction to MTI moving target indication system design for use in the fields of earth observation surveillance and reconnaissance with particular regard to the suppression of clutter returns. Coverage includes signal processing clutter models, array processing theory, adapted linear arrays, non-linear antenna configurations, circular arrays, space frequency techniques and clutter suppression jamming conditions. This book is a follow up to the author's successful first book on STAP.

Advanced Signal Processing Handbook Stergios Stergiopoulos, 2017-09-08. Advances in digital signal processing algorithms and computer technology have combined to produce real time systems with capabilities far beyond those of just a few years ago. Nonlinear adaptive methods for signal processing have emerged to provide better array gain performance, however they lack the robustness of conventional algorithms. The challenge remains to develop a concept that exploits the advantages of both a scheme that integrates these methods in practical real time systems. The Advanced Signal Processing Handbook helps you meet that challenge. Beyond offering an outstanding introduction to the principles and applications of advanced signal processing, it develops a generic processing structure that takes advantage of the similarities that exist among radar, sonar and medical imaging systems and integrates conventional and nonlinear processing schemes.
