Remedial Action Technology for Waste Disposal Sites P. J. Rogoszewski, H. Bryson, Kathleen Wagner, 1983 Remedial Action Technology for Waste Disposal Sites, 1983 **Selection of Control Technologies for Remediation of Lead Battery Recycling Sites**, 1992 *Handbook*, 1985 **Handbook for Remedial Action at Waste Disposal Sites** Municipal Environmental Research Laboratory, 1982 *U.S. EPA National Conference on Management of Uncontrolled Hazardous Waste Sites*, 1980 *EPA-600/9*, 1981-03 **Fundamentals of Site Remediation** John Pichtel, 2007-08-24 This introductory manual addresses environmental site restoration practices that both ensure compliance with federal statutes and prevent further contamination or expense. It also includes up to date information and several new features to enhance the process. Emphasizing environmental chemistry, soil science, microbiology, plant science and the underlying chemical processes, author John Pichtel discusses relevant chemical principles as they apply to the cleanup and removal of hazardous chemicals from soil, geological strata and groundwater. The first part of this book provides an overview of the recent history of environmental contamination and the formulation of relevant regulations leading to regulations for hazardous waste site remediation. This part also provides a background for several salient aspects of site remediation. The second part of the book closely examines field remediation technologies including phytoremediation, bioremediation and electrokinetic remediation. Theory of operation, practical considerations and possible environmental impacts and other consequences of use are also discussed. Readers of the first edition will discover two new chapters in this Second Edition covering permeable reactive walls and technology selection. This updated edition now also includes end of chapter questions and instructions for completing two web based exercises: one for the chapter on environmental site assessments and one for the chapter on technology selection. Conducting Remedial Investigations/feasibility Studies for CERCLA Municipal Landfill Sites United States. Environmental Protection Agency. Office of Emergency and Remedial Response, 1991 *Stabilization Technologies for RCRA Corrective Actions* Center for Environmental Research Information (U.S.), 1991 *Unit Operations in Environmental Engineering* Robert Noyes, 1994-12-31 This book discusses the practical aspects of environmental technology organized into eight chapters relating to unit operations as follows: 1 Biological Technology, 2 Chemical Technology, 3 Containment and Barrier Technology, 4 Immobilization Technology, 5 Membrane Technology, 6 Physical Technology, 7 Radiation and Electrical Technology, 8 Thermal Destruction Technology. Traditional technologies have been included as well as those that can be considered innovative and emerging. The traditional approaches have been the most successful as contractors are careful about bidding on some of the newer technologies. However, as regulatory requirements increase, markets will open for the innovative and emerging processes. There will be increasing pressure to break down complex waste streams with each subsequent stream demanding separate treatment. In addition, a number of technologies have been developed by combining processes directly or in a treatment train and these developments are expected to assume increasing importance. However,

such concerns as uncertainties due to liability regulatory approval price competition and client approval have limited the application of some of these newer technologies
