The Magic Bullet? Tim Benbow, 2004-06-30 Bombing by use of laser guided weaponry is evolution not revolution aircraft have been bombing for more than 85 years but a network of sensors in space or on the sea bed that can track every move without human involvement may be revolution This and other technical advances may enable intervention and prevention without conflict certainly with non lethal weaponry The future structure of armed forces the nature and size of defence industries the potential risk of there being a single superpower and many other matters depend on how much the present and future change in military affairs is evolution and how much is genuine revolution This study based on report papers prepared for the Ministry of Defence and praised for their clarity offers clear analysis of the debate for lay students of current and military affairs as well as professionals working in the fields of politics science security and military strategy and planning

Changing War Gary Sheffield, Peter Gray, 2013-10-24 In 1918 the British Expeditionary Force BEF played a critical role in defeating the German army and thus winning the First World War This Hundred Days campaign August to November 1918 was the greatest series of land victories in British military history 1918 also saw the creation of the Royal Air Force the world's first independent air service from the Royal Flying Corps and the Royal Naval Air Service Until recently British histories of the First World War have tended to concentrate on the earlier battles of 1916 and 1917 and often underplayed this vitally important period Changing War fills this significant gap in our knowledge by providing in depth examinations of key aspects of the operations of the British Army the Royal Air Force and its antecedents in the climactic year of the First World War Written by a group of established historians and emerging scholars it sheds light not only on 1918 but on the revolutionary changes in warfare that took place at that time

US Intervention Policy and Army Innovation Richard Lock-Pullan, 2004-08-02 US Intervention Policy and Army Innovation examines how the US Army rebuilt itself after the Vietnam War and how this has affected US intervention policy from the victory of the Gulf War to the failure of Somalia the Bosnian and Kosovo interventions and the use of force post 9 11 Richard Lock Pullan analyzes the changes in US military intervention strategy by examining two separate issues the nature of the US Army as it rebuilt itself after the Vietnam War and the attempts by the US to establish criteria for future military interventions He first argues that US strategy traditionally relied upon national mobilization to co ordinate political aims and military means he subsequently analyzes how this changed to a formula of establishing militarily achievable political objectives prior to the use of force Drawing on a vast body of material and on strategic culture and military innovation literature Lock Pullan demonstrates that the strategic lessons were a product of the rebuilding of the Army's identity as it became a professional all

volunteer force and that the Army's new doctrine developed a new way of war for the nation embodied in the AirLand Battle doctrine which changed the approach to strategy This book finally gives a practical analysis of how the interventions in Panama and the Gulf War vindicated this approach and brought a revived confidence in the use of force while more recent campaigns in Somalia Kosovo and Bosnia exposed its weaknesses and the limiting nature of the Army's thinking The legacy of the Army's innovation is examined in the new strategic environment post 9 11 with the operations in Afghanistan and Iraq

Protection of Information and the Right to Privacy - A New Equilibrium? Luciano Floridi,2014-05-19 This book presents the latest research on the challenges and solutions affecting the equilibrium between freedom of speech freedom of information information security and the right to informational privacy Given the complexity of the topics addressed the book shows how old legal and ethical frameworks may need to be not only updated but also supplemented and complemented by new conceptual solutions Neither a conservative attitude more of the same nor a revolutionary zeal never seen before is likely to lead to satisfactory solutions Instead more reflection and better conceptual design are needed not least to harmonise different perspectives and legal frameworks internationally The focus of the book is on how we may reconcile high levels of information security with robust degrees of informational privacy also in connection with recent challenges presented by phenomena such as big data and security scandals as well as new legislation initiatives such as those concerning the right to be forgotten and the use of personal data in biomedical research The book seeks to offer analyses and solutions of the new tensions in order to build a fair shareable and sustainable balance in this vital area of human interactions

Indian and American Perspectives on Technological Developments in the Maritime Domain and Their Strategic Implications in the Indian Ocean Region Vice Admiral Pradeep

Kaushiva,Commander Kamlesh K Agnihotri,2013-04-15 The maritime domain hosting the highways of global prosperity through trade industrial raw material and energy links rates high in its potential for conflict As the global pendulum of economic vibrancy swings eastwards the Indian Ocean Region IOR has been receiving increasing attention from all actors state as well as non state ones and now presents itself in sharp focus as one of the volatile seascapes on this earth The navies operating in the region will therefore need to depend on high technology and associated doctrines and procedures so as to effectively deal with the wide spectrum of challenges therein It will also become incumbent upon such littoral states as can afford the high cost of technology to catch up so as to maintain their relevance in the great game being played out in their very own backyard The United States as a leader in inventing and exploiting technology sets its own benchmarks in internalization of advanced technologies to undertake maritime missions at and from the sea in support of its military

operations ashore China on the other hand has been striving towards achieving asymmetric war fighting capabilities supported by other developing technologies as well as core capabilities like the Beidou position fixing system which would be central to network centric operations including missile guidance systems As the IOR increasingly transforms into an arena of extra regional power play the implications of technologically enabled confrontations and their impact on resident states are poised to weigh in on a scale never imagined before There is thus a greater need for India to gain in depth knowledge of and develop a perspective on advanced technology sensors weapons supporting infrastructures doctrines and futuristic concepts in the maritime domain and their potential as strategic game changers in the IOR This book aims to foster greater understanding of the challenges facing the IOR and also look at how the technological advances in the maritime domain may possibly handle such challenges It should provide useful resource material to those investigating the impact of technology on meeting the maritime challenges in the IOR Routledge Handbook of Naval Strategy and Security Joachim

The Development of British Naval Aviation, 1914-1918 Alexander Howlett, 2021-06-08 The Royal Naval Air Service RNAS revolutionized warfare at sea on land and in the air This little known naval aviation organization introduced and operationalized aircraft carrier strike aerial anti submarine warfare strategic bombing and the air defence of the British Isles more than 20 years before the outbreak of the Second World War Traditionally marginalized in a literature dominated by the Royal Flying Corps and the Royal Air Force the RNAS and its innovative practitioners nevertheless shaped the fundamentals of air power and contributed significantly to the Allied victory in the First World War The Development of British Naval Aviation utilizes archival documents and newly published research to resurrect the legacy of the RNAS and demonstrate its central role in Britain's war effort

Killer Robots Armin Krishnan, 2016-04-22 Military robots and other potentially autonomous robotic systems such as unmanned combat air vehicles UCAVs and unmanned ground vehicles UGVs could soon be introduced to the battlefield Look further into the future and we may see autonomous micro and nanorobots armed and deployed in swarms of thousands or even millions This growing automation of warfare may come to represent a major discontinuity in the history of warfare humans will first be removed from the battlefield and may one day even be largely excluded from the decision cycle in future high tech and high speed robotic warfare Although the current technological issues will no doubt be overcome the greatest obstacles to automated weapons on the battlefield are likely to be legal and ethical concerns Armin Krishnan explores the technological legal and ethical issues connected to combat robotics examining both the opportunities and limitations of autonomous weapons He also proposes solutions to the future regulation of military robotics through international law
