*Sharing the Light* Lisa Raphals, 1998-07-30 *Sharing the Light* explores historical and philosophical shifts in the depiction of women and virtue in the early centuries of the Chinese state These changes had far reaching effects on both the treatment of women in Chinese society and on the formation of Chinese philosophical discourse on ethics cosmology epistemology and self cultivation Warring States and Han dynasty narratives frequently represented women as intellectually adroit politically astute and ethically virtuous these histories discourses and life stories portray women as active participants within their own society not inert victims of it The women depicted resembled sages ministers and generals as the mainstays and destroyers of dynasties These stories emphasized that sagacity intellect strategy and statecraft were virtues proper to women an emphasis that effectively disappeared from later collections and instruction texts by and for women During the same period there were also important changes in the understanding of two polarities that delineated what now is called gender Han correlative cosmology included a range of hierarchical analogies between yin and yang and

men and women and the understanding of yin and yang shifted from complementarity toward hierarchy Similarly the doctrine of separate spheres inner and outer nei wai shifted from a notion of appropriate distinction between men and women toward physical social and intellectual separation and isolation      **Bibliography of the History of Medicine** ,1984

The Origins of the Idea of Scientific Progress Daniel Špelda,2024-06-21 This volume offers a new interpretation of the genesis of the idea of scientific progress in early modern science and philosophy The interpretation argues that the idea of scientific progress was not a historical category but an epistemological one The main thesis of the book posits that the idea of scientific progress was a methodological means of dealing with the contingency of nature To illustrate the novelty of the idea the individual chapters compare several features of Renaissance natural philosophy with a new regime of knowledge that included time as an inevitable factor of empirical research The temporal regime of knowledge is illustrated by the work of Bernard de Fontenelle and his colleagues at the Acad mie des sciences in Paris at the end of the 17th century The new interpretation remedies a gap in recent scholarship where the idea of scientific progress has been overlooked even though the early modern natural philosophers themselves used it to describe the nature of their research The book places both well known texts and less studied documents in a new light thus contributing to the lively and rich debate on the origins and nature of early modern science and philosophy It is of interest to scholars studying the history of early modern philosophy and science
