Properties of Aluminium Gallium Arsenide Sadao Adachi, 1993 The alloy system AlGaAs GaAs is potentially of great importance for many high speed electronics and optoelectronic devices because the lattice parameter difference GaAs and AlGaAs is very small which promises an insignificant concentration of undesirable interface states Thanks to this prominent feature a number of interesting properties and phenomena such as high mobility low dimensional carrier gases resonant tunnelling and fractional quantum Hall effect have been found in the AlGaAs GaAs heterostructure system New devices such as modulation doped FETs heterojunction bipolar transistors resonant tunnelling transistors quantum well lasers and other photonic and quantum effect devices have also been developed recently using this material system These areas are recognized as not being the most interesting and active fields in semiconductor physics and device engineering
