

$$x_{n+1} = x_n - \frac{f(x_n)}{f'(x_n)}$$

Numerical solutions of equations

You can solve equations of the form $f(x) = 0$ using the Newton-Raphson process

Use the Newton-Raphson process to find the root of the equation:

$$x^4 + x^2 = 80$$

Use $x_0 = 3$ and give your answer to 2 decimal places.

$$f(x) = x^4 + x^2 - 80$$

$$f'(x) = 4x^3 + 2x$$

$$x_0 = 3$$

$$x_1 = 2.912$$

$$x_{n+1} = x_n - \frac{f(x_n)}{f'(x_n)}$$

$$x_1 = x_0 - \frac{(x_0)^4 + (x_0)^2 - 80}{4(x_0)^3 + 2(x_0)}$$

$$x_1 = 3 - \frac{(3)^4 + (3)^2 - 80}{4(3)^3 + 2(3)}$$

$$x_1 = 2.912$$

Our current approximation is x_0 . replace the fraction with equivalent expressions

Sub in $x_0 = 3$

Numerical Solutions of Boundary Value Problems of Non-linear Differential Equations Sujaul Chowdhury,Syed Badiuzzaman Faruque,Ponkog Kumar Das,2021-10-24 The book presents in comprehensive detail numerical solutions to boundary value problems of a number of non linear differential equations Replacing derivatives by finite difference approximations in these differential equations leads to a system of non linear algebraic equations which we have solved using Newton s iterative method In each case we have also obtained Euler solutions and ascertained that the iterations converge to Euler solutions We find that except for the boundary values initial values of the 1st iteration need not be anything close to the final convergent values of the numerical solution Programs in Mathematica 6 0 were written to obtain the numerical solutions

Numerical Methods for Engineers and Scientists, Second Edition, Joe D. Hoffman,Steven Frankel,2001-05-31 Emphasizing the finite difference approach for solving differential equations the second edition of Numerical Methods for Engineers and Scientists presents a methodology for systematically constructing individual computer programs Providing easy access to accurate solutions to complex scientific and engineering problems each chapter begins with objectives a discussion of a representative application and an outline of special features summing up with a list of tasks students should be able to complete after reading the chapter perfect for use as a study guide or for review The AIAA Journal calls the book a good solid instructional text on the basic tools of numerical analysis

On The Exact Solution of Nonlinear Differential Equations Using Variational Iteration Method and Homotopy Perturbation Method Mohsen Soori,S. Salman Nourazar,2019-01-16 Research Paper postgraduate from the year 2019 in the subject Mathematics Applied Mathematics language English abstract In this paper the Variational Iteration Method VIM and the Homotopy Perturbation Method HPM are applied to solve the non linear differential equations The Newell Whitehead Segel equation the Burgers Huxley the Burgers Fisher equation the Fitzhugh Nagumo Equation the Fisher Type Equation are studied in different chapters and exact solutions are also obtained A comparison is made between obtained results in finding the exact solution of the equation in order to present precision of the methods The results prove capability and great potential of the methods as effective algorithms in order to obtain the exact solution of non linear differential equations

Homotopy Analysis Method in Nonlinear Differential Equations Shijun Liao,2012-06-22 Homotopy Analysis Method in Nonlinear Differential Equations presents the latest developments and applications of the analytic approximation method for highly nonlinear problems namely the homotopy analysis method HAM Unlike perturbation methods the HAM has nothing to do with small large physical parameters In addition it provides great freedom to choose the equation type of linear sub problems and the base functions of a solution Above all it provides a convenient way

to guarantee the convergence of a solution This book consists of three parts Part I provides its basic ideas and theoretical development Part II presents the HAM based Mathematica package BVPh 1.0 for nonlinear boundary value problems and its applications Part III shows the validity of the HAM for nonlinear PDEs such as the American put option and resonance criterion of nonlinear travelling waves New solutions to a number of nonlinear problems are presented illustrating the originality of the HAM Mathematica codes are freely available online to make it easy for readers to understand and use the HAM This book is suitable for researchers and postgraduates in applied mathematics physics nonlinear mechanics finance and engineering Dr Shijun Liao a distinguished professor of Shanghai Jiao Tong University is a pioneer of the HAM

Numerical Solution of Differential Equations Isaac Fried, 2014-05-10 Numerical Solution of Differential Equations is a 10 chapter text that provides the numerical solution and practical aspects of differential equations After a brief overview of the fundamentals of differential equations this book goes on presenting the principal useful discretization techniques and their theoretical aspects along with geometrical and physical examples mainly from continuum mechanics Considerable chapters are devoted to the development of the techniques of the numerical solution of differential equations and their analysis The remaining chapters explore the influential invention in computational mechanics finite elements Each chapter emphasizes the relationship among the analytic formulation of the physical event the discretization techniques applied to it the algebraic properties of the discrete systems created and the properties of the digital computer This book will be of great value to undergraduate and graduate mathematics and physics students *Advance Numerical Techniques to Solve Linear and Nonlinear Differential Equations* Geeta Arora, Mangey Ram, 2024-01-23 Real world issues can be translated into the language and concepts of mathematics with the use of mathematical models Models guided by differential equations with intuitive solutions can be used throughout engineering and the sciences Almost any changing system may be described by a set of differential equations They may be found just about anywhere you look in fields including physics engineering economics sociology biology business healthcare etc The nature of these equations has been investigated by several mathematicians over the course of hundreds of years and consequently numerous effective methods for solving them have been created It is often impractical to find a purely analytical solution to a system described by a differential equation because either the system itself is too complex or the system being described is too vast Numerical approaches and computer simulations are especially helpful in such systems The content provided in this book involves real world examples explores research challenges in numerical treatment and demonstrates how to create new numerical methods for resolving problems Theories and practical applications in the sciences and engineering are also discussed Students of engineering and applied mathematics as well as researchers and engineers who use computers to solve problems numerically or oversee those who do will find this book focusing on advance numerical techniques to solve linear and nonlinear differential equations useful
