Digital innovation in citizen science to enhance water quality monitoring in developing countries Pattinson, N. B., Taylor, J., Dickens, Chris W. S., Graham, P. M., 2023-12-31 Freshwater systems are disproportionately adversely affected by the ongoing global environmental crisis The effective and efficient water resource conservation and management necessary to mitigate the crisis requires monitoring data especially on water quality This is recognized by Sustainable Development Goal SDG 6 particularly indicator 6.3.2 which requires all UN member states to measure and report the proportion of water bodies with good ambient water quality However gathering sufficient data on water quality is reliant on data collection at spatial and temporal scales that are generally outside the capacity of institutions using conventional methods Digital technologies such as wireless sensor networks and remote sensing have come to the fore as promising avenues to increase the scope of data collection and reporting Citizen science which goes by many names e.g participatory science or community based monitoring has also been earmarked as a powerful mechanism to improve monitoring However both avenues have drawbacks and limitations The synergy between the strengths of modern technologies and citizen science presents an opportunity to use the best features of each to mitigate the shortcomings of the other This paper briefly synthesizes recent research illustrating how smartphones sometimes in conjunction with other sensors present a nexus point method for citizen scientists to engage with and use

sophisticated modern technology for water quality monitoring This paper also presents a brief non exhaustive research synthesis of some examples of current technological upgrades or innovations regarding smartphones in citizen science water quality monitoring in developing countries and how these can assist in objective comprehensive and improved data collection management and reporting While digital innovations are being rapidly developed worldwide there remains a paucity of scientific and socioeconomic validation of their suitability and usefulness within citizen science This perhaps contributes to the fact that the uptake and upscaling of smartphone assisted citizen science continues to underperform compared to its potential within water resource management and SDG reporting Ultimately we recommend that more rigorous scientific research efforts be dedicated to exploring the suitability of digital innovations in citizen science in the context of developing countries and SDG reporting

Psychology of Science Robert W. Proctor, E.J. Capaldi, 2012-07-12 The study of science sometimes referred to as metascience is a new and growing field that includes the philosophy of science history of science sociology of science and anthropology of science In the last ten years the formal study of the psychology of science has also emerged The psychology of science focuses on the individual scientist influenced by intelligence motivation personality and the development of scientific interest thought ability and achievement over a lifespan Science can be defined as explicitly and systematically testing hypotheses Defined more broadly science includes wider processes such as theory construction and the hypothesis testing seen in children and non scientific adults Most prior work in the study of science has emphasized the role of explicit reasoning however contemporary research in psychology emphasizes the importance of implicit processes in decision making and choice and assumes that the performance of many tasks involves a complex relationship between implicit and explicit processes Psychology of Science brings together contributions from leaders in the emerging discipline of the psychology of science with other experts on the roles of implicit and explicit processes in thinking Highlighting the role of implicit processes in the creation of scientific knowledge this volume links the psychology of science to many strands of psychology including cognitive social and developmental psychology as well as neuroscience Ultimately this volume raises awareness of the psychology of science among psychologists philosophers and sociologists of science and anyone interested in the metasciences

Ernan McMullin and Critical Realism in the Science-Theology Dialogue Paul L. Allen, 2016-05-13 Scientists philosophers and theologians have wrestled repeatedly with the question of whether knowledge is similar or different in their various understandings of the world and God Although agreement is still elusive the epistemology of critical realism associated with Ian Barbour John Polkinghorne and Arthur Peacocke remains widely credible Relying on the lifetime work of philosopher Ernan McMullin this book expands our understanding of critical realism beyond a permanent stand off between the subjective and objective whether in science or theology Critical realism illuminates the subject and the objectively known simultaneously Responding to criticisms made against it this book defends critical realism in science and theology with a specific role to play in our understanding of God

Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Committee on the Science of Science Communication: A Research Agenda, 2017-03-08 Science and technology are embedded in virtually every aspect of modern life. As a result, people face an increasing need to integrate information from science with their personal values and other considerations as they make important life decisions about medical care, the safety of foods, what to do about climate change, and many other issues. Communicating science effectively, however, is a complex task and an acquired skill. Moreover, the approaches to communicating science that will be most effective for specific audiences and circumstances are not obvious. Fortunately, there is an expanding science base from diverse disciplines that can support science communicators in making these determinations. *Communicating Science Effectively* offers a research agenda for science communicators and researchers seeking to apply this research and fill gaps in knowledge about how to communicate effectively about science, focusing in particular on issues that are contentious in the public sphere. To inform this research agenda, this publication identifies important influences—psychological, economic, political, social, cultural, and media—related to how science related to such issues is understood, perceived, and used.
