

JOHN POLKINGHORNE

The background of the book cover is a complex, abstract composition. It features a prominent DNA double helix structure in the upper half, rendered in dark, bold lines. Below and around the helix are various wavy, marbled patterns in shades of grey, black, and white, creating a sense of movement and depth. The overall aesthetic is scientific and philosophical.

Science and Religion Gary B. Ferngren, 2017-03-01 An essential examination of the historical relationship between science and religion. Since its publication in 2002, *Science and Religion* has proven to be a widely admired survey of the complex relationship of Western religious traditions to science from the beginning of the Christian era to the late twentieth century. In the second edition, eleven new essays expand the scope and enhance the analysis of this enduringly popular book. Tracing the rise of science from its birth in the medieval West through the scientific revolution, the contributors here assess historical changes in scientific understanding brought about by transformations in physics, anthropology, and the neurosciences, and major shifts marked by the discoveries of Copernicus, Galileo, Isaac Newton, Charles Darwin, and others. In seeking to appreciate the intersection of scientific discovery and the responses of religious groups, contributors also explore the theological implications of contemporary science and evaluate approaches such as the Bible in science and the modern synthesis in evolution, which are at the center of debates in the historiography of science. The second edition provides chapters that have been revised to reflect current scholarship, along with new chapters that bring fresh perspectives on a diverse range of topics, including new scientific approaches and disciplines, and non-Christian traditions such as Judaism, Islam, Asiatic religions, and atheism. This indispensable classroom guide is now more useful than ever before.
