Numbers And Geometry:

Complex Numbers in Geometry I. M. Yaglom, 2014-05-12 Complex Numbers in Geometry focuses on the principles interrelations and applications of geometry and algebra The book first offers information on the types and geometrical interpretation of complex numbers Topics include interpretation of ordinary complex numbers in the Lobachevskii plane double numbers as oriented lines of the Lobachevskii plane dual numbers as oriented lines of a plane most general complex numbers and double hypercomplex and dual numbers The text then takes a look at circular transformations and circular geometry including ordinary circular transformations axial circular transformations of the Lobachevskii plane circular transformations of the Lobachevskii plane axial circular transformations and ordinary circular transformations The manuscript is intended for pupils in high schools and students in the mathematics departments of universities and teachers colleges The publication is also useful in the work of mathematical societies and teachers of mathematics in junior high and high schools

Numbers and Geometry John Stillwell, 1997-10-01 Complex Numbers and Geometry Liang-shin Hahn, 2019-12-26 The purpose of this book is to demonstrate that complex numbers and geometry can be blended together beautifully This results in easy proofs and natural generalizations of many theorems in plane geometry such as the Napoleon theorem the Ptolemy Euler theorem the Simson theorem and the Morley theorem The book is self contained no background in complex numbers is assumed and can be covered at a leisurely pace in a one semester course Many of the chapters can be read independently Over 100 exercises are included The book would be suitable as a text for a geometry course or for a problem solving seminar or as enrichment for the student who wants to know more

An Introduction to the Geometry of Numbers J.W.S. Cassels, 1996-12-16 From the reviews A well written very thorough account Among the topics are lattices reduction Minkowski's Theorem distance functions packings and automorphisms some applications to number theory excellent bibliographical references The American Mathematical Monthly

Geometry of Complex Numbers Hans Schwerdtfeger, 1979-01-01 Illuminating widely praised book on analytic geometry of circles the Moebius transformation and 2 dimensional non Euclidean geometries This book should be in every library and every expert in classical function theory should be familiar with this material The author has performed a distinct service by making this material so conveniently accessible in a single book Mathematical Review

Lectures on the Geometry of Numbers Carl Ludwig Siegel, 1989-11-16 Carl Ludwig Siegel gave a course of lectures on the Geometry of Numbers at New York University during the academic year 1945 46 when there were hardly any books on the subject other than Minkowski's original one This volume stems from Siegel's requirements of accuracy in detail both in the text and in the illustrations but involving no changes in the structure and style of the lectures as originally delivered This book is an enticing introduction to Minkowski's great work It also reveals the workings of a remarkable mind such as Siegel's with its precision and power and aesthetic charm It is of interest to the aspiring as well as the established mathematician with its unique blend of arithmetic algebra
