Khazanov, 2016-11-17 Space weather is one of the most significant natural hazards to human life and health Conditions of the sun and in the solar wind magnetosphere ionosphere and thermosphere can influence the performance and reliability of space borne and ground based technological systems If conditions in the space environment are adverse they can cause disruption of satellite operations communications navigation and electric power distribution grids leading to a variety of socioeconomic losses This book provides an overview of our current knowledge and theoretical understanding of space weather formation and covers all major topics of this phenomena from the sun to the Earth's ionosphere and thermosphere thus providing a fully updated

review of this rapidly advancing field The book brings together an outstanding team of internationally recognised contributors to cover topics such as solar wind the earth s magnetic field radiation belts the aurora spacecraft charging orbital drag and GPS Cold-Ion Populations and Cold-Electron Populations in the Earth's Magnetosphere and Their Impact on the System, 2nd edition Joseph E. Borovsky, Gian Luca Delzano, Elena Kronberg , Cecilia Norgen, 2023-05-11 Cold ion populations and cold electron populations are extremely difficult to measure in the Earth s magnetosphere and their properties evolutions and controlling factors are poorly understood They are sometimes referred to as the hidden populations But they are known to have multiple impacts on the behavior of the global magnetospheric system These impacts include a the reduction of the dayside reconnection rate and consequently the reduction of solar wind magnetosphere coupling b alteration of the growth rate and saturation amplitudes of plasma waves resulting in alterations of the energization rates of the radiation belts c changes in plasma wave properties resulting in changes in the loss rates of the ring current and radiation belts d changes in the mass density of the magnetosphere resulting in changes in the radial diffusion of the radiation belts e spatial and temporal structuring of the aurora f altering magnetotail reconnection g changing spacecraft charging and h acting as sources for warm and hot magnetospheric populations A recent workshop on the cold particle populations of the magnetosphere inspired new work on the outstanding problems caused by a lack of understanding of those cold populations This Research Topic will collect reports of that new work and will stimulate the formation of author teams to write review articles on what is known and what needs to be known Commentaries assessing the present situation and guiding the research field into the future will be solicited from the community Methods articles describing new measurement techniques and new spaceflight mission concepts will be welcomed **Jupiter** Fran Bagenal, Timothy E. Dowling, William B. McKinnon, William McKinnon, 2006 This comprehensive volume authoritatively describes our understanding of the complex and fascinating jovian system Written by a team of world experts it brings together every aspect of the giant planetary system from the deep interior of Jupiter to the distant tiny satellites and swarms of escaping gas and dust Chapters present a synthesis of experimental data from the Voyager Galileo and Cassini missions from telescopes on the ground and in space and from theoretical models on the different components that make up the Jupiter system This book is a valuable introduction for graduate students and an indispensable resource for all researchers in planetary science **Nuclear Science Abstracts**, 1976-06
