Anthropology and Contemporary Human Problems John H. Bodley, 2012-04-12 We live in a time of global mega problems of unsustainable growth and consumption resource depletion ecosystem degradation global warming escalating energy costs poverty and conflict Cultural anthropologist John H Bodley trenchantly critiques these most pressing issues and shows how anthropology makes it possible to find solutions The focus on culture scale suggests that many solutions may be found by developing local communities supported by regional markets and ecosystems rather than by making the continuous accumulation of financial capital the dominant cultural process throughout the world Now in its sixth edition this classic textbook continues to have tremendous relevance and is more timely than ever in light of the recent global economic crisis It exposes readers to the problems of a world out of balance with misdirected growth by the elite Bodley offers examples from prehistoric and modern tribal societies along side of ancient imperial and contemporary commercial societies Students will find this to be the trusted source to build a world view Anthropology and Contemporary Human Problems is ideal for adoption in anthropology and sociology courses on globalization cultural ecology social class and inequality the environment sustainability and development [A Laboratory Manual for the Solution of Problems in Biology](#) Richard Worthy Sharpe, 1911

Biology and Wildlife of the Mediterranean Region Jacques Blondel, James Aronson, 1999 The Mediterranean is an outstanding hot spot of biological diversity It is exceptional not only for this but also because of its long history of interactions between its human inhabitants and the other fauna and flora of the region The cradle of many civilizations the Mediterranean region has been host to humans for thousands of years This book is the first to synthesise our current understanding of the ecology biology and geology of Mediterranean animals birds and plants and their habitats The authors focus on the unique historical determinants and spatial patterns of Mediterranean biodiversity In particular the dramatic impacts of long term human activities on the region s landscapes flora and fauna are considered This fascinating story will be of interest to researchers and students in ecology biology conservation and geography as well as to naturalists and ecotourists visiting this popular holiday region **On the Evolution of Human Behavior** Peter C. Reynolds, 1981

Challenging many of the premises of conventional anthropological theory On the evolution of human behavior draws on recent evidence from psychobiology linguistics and ethology to trace the evolution of human social behavior from that of other primates Rejecting the assumption that significant behavioral discrepancies between man and other primate species stem from equally significant psychological differences Reynolds argues instead that small evolutionary changes may result in greatly increased complexity of behavior His frankly ethological theory of human origins assumes that reason and instinct evolve together and that instinctual mechanisms are necessary for the emergence of human culture book cover
