Sarhan Al-Zwainy, Ibraheem A. Aidan, 2018-08-17 The states of the world invest very much money for the construction and maintenance of roads since roads are considered very important in the transportation sector as an indispensable tool Roads are used to transport goods and persons from one place to another So the process of maintenance management for roads networks is considered very important because it needs various kinds of resources This process must be completed with a very high degree of accuracy to achieve more profit of available resources and to keep on the acceptable level of service for these road networks therefore the significance of this book lies in dealing with an important area of the constructional and urban development which is the flexible pavement maintenance operations Street Smart Gabriel Roth, 2017-07-05 The poor health of today's roads a subject close to the hearts of motorists taxpayers and government treasurers around the world has resulted from faulty incentives that misdirect government decision makers according to the contributors to Street Smart During the 1990s bad government decision making resulted in the U.S. Interstate Highway System growing by only one seventh the rate of traffic growth The poor maintenance of existing roads is another concern In

cities around the world highly political and wasteful government decision making has led to excessive traffic congestion that has created long commutes reduced safety and caused loss of leisure time Street Smart examines the privatization of roads in theory and in practice The authors see at least four possible roles for private companies beyond the well known one of working under contract to design build or maintain governmentally provided roads These include testing and licensing vehicles and drivers management of government owned facilities franchising and outright private ownership Two chapters describe the history of private roads in the United Kingdom and the United States Contemporary examples are provided of road pricing privatizing and contracting out are evident in environs as diverse as Singapore Southern California and Scandinavia and cities as different as Bergen Norway and London England Finally several chapters examine strategies for implementing privatization The principles governing providing scarce resources in free societies are well known We apply them to such necessities as energy food and water so why not to road space The main obstacle to private or semi private ownership of roads is likely to remain the reluctance of the political class to give up a lucrative source of power and influence Those who want decisions about road services to be controlled by the interplay of consumers and suppliers in free markets rat
