Creating Sustainable Community Programs Mark R. Daniels, 2001-02-28 Public opinion polls consistently reveal the lack of confidence disillusionment and mistrust that citizens feel toward government Daniels and his contributors believe that the relationship between citizens and their governments can be changed by facilitating greater citizen collaboration with government particularly through local sustainable programs As the case studies show often sustainable community programs are created through grassroots movements that are initiated and managed by citizens themselves bringing them in contact with their local elected and appointed officials Unlike traditional programs that are administered by local officials on behalf of their citizens once sustainable community programs are created citizens administer their own programs in collaboration with local officials The case studies look at a variety of sustainable programs primarily in the United States that help to deal with issues such as recycling transportation microcredit site redevelopment pollution health care and hunger

Creating Sustainable Community Programs is the first book on sustainable programs that is intended for an audience of public administration scholars researchers and students as well as practitioners who are searching for ways to change the relationship between citizens and their governments

New Tools for Environmental Protection National Research Council, Division of Behavioral and Social Sciences and Education, Committee on the Human Dimensions of Global Change, 2002-06-13 Many people believe that environmental regulation has passed a point of diminishing returns the quick fixes have been achieved and the main sources of pollution are shifting from large point sources to more diffuse sources that are more difficult and expensive to regulate The political climate has also changed in the United States since the 1970s in ways that provide impetus to seek alternatives to regulation This book examines the potential of some of these new tools that emphasize education information and

voluntary measures Contributors summarize what we know about the effectiveness of these tools both individually and in combination with regulatory and economic policy instruments They also extract practical lessons from this knowledge and consider what is needed to make these tools more effective The book will be of interest to environmental policy practitioners and to researchers and students concerned with applying social and behavioral sciences knowledge to improve environmental quality

Preserving the Legacy Allen G. Noble, Frank J. Costa, 1999-01-01 Though only a relatively recent topic of worldwide discussion and interest the concept of sustainable development traces its origins to the late eighteenth century when concern for resource conservation and environmental integrity first arose From this beginning the concern for sustainable development progressively expanded from being purely local to having a regional and national relevance and finally to being a global concern of import Preserving the Legacy examines this expansion while discussing several general approaches to the understanding and application of the concept of sustainability Also discussed are such weighty issues as the balancing of development aspirations with environmental management in developing countries and the means by which residents in an urbanizing region in a developed country can be induced to consider sustainable development as both a goal and a limiting factor in the conversion of agricultural land Offering both real world examples of sustainability issues and a forecast for the future of sustainability theory and practice this fascinating volume will prove invaluable to scholars of the environment geography and urban planning

Acequia Culture José A. Rivera, 2005-01-21 Conflicts between Hispanic farmers and developers made for compelling reading in The Milagro Beanfield War the famous novel of life in a northern New Mexico village in which tradition triumphs over modernity But as cities grow and industries expand are acequias or community irrigation ditches a wise and efficient use of water in the arid Southwest Jos Rivera presents the contemporary case for the value of acequias and the communities they nurture in the river valleys of southern Colorado and New Mexico Recognizing that water is the lifeblood of the community Rivera delineates an acequia culture based on a reciprocal relationship between irrigation and community The acequia experience grows out of a conservation ethic and a tradition of sharing that should be recognized and preserved in an age of increasing competition for scarce water resources A worthwhile contribution to the future management of water resources Professor Michael C Meyer

development research **A Research Framework for Natural Resource-based Communities in the Pacific Northwest** Harriet H. Christensen, 2001 Ecosystem Management for Sustainability John Peine, Samab Foundation, 1998-06-23 As the 21st century approaches the need to put principles of sustainable living and ecosystem management into practice has never been so urgent Ecosystem Management for Sustainability recognizes this need and shares the experiences of the editor and 54 contributing authors each leaders in the advancement of ecosystem management and champions of the natural environment The book uses the Man And Biosphere program as a case example of a wide variety of resource management activities at work Through the multi authored contributions to this book documentation of a comprehensive spectrum of ecosystem management and sustainable development principles is achieved Ecosystem Management for Sustainability provides a link between theory and practice of these two philosophies **Forum for Applied Research and Public Policy** , 2001 *Under The Blade* Thomas Lyson, 2018-05-04 Under the Blade The Conversion of Agricultural Landscapes examines the patterns causes and consequences of current land use decisions in the United States particularly the conversion of farmland to housing roads and other development Changes in land use are the result of complex interactions among law economics landscape characteristics social and political forces ethics and aesthetics By examining farmland loss from each of these perspectives and then integrating the results into policy recommendations Under the Blade makes an important contribution to the ongoing debate on the optimal use of a finite resourceland In 1998 the last farm in Des Plaines Illinois was subdivided Seven acres along the Niobrara River in north central Nebraska sold for USD5700 per acre twenty times the price for agricultural use Waukesha County Wisconsin although still largely in agriculture has been almost entirely zoned for small lot subdivisions Nationwide the cumulative effect of thousands of individual land use decisions is an orgiastic devouring of the countryside that consumes at least 1 4 million acres of rural land each year and fragments a much larger area The effects on landscape functions include loss of agricultural production water pollution increases in local runoff and flooding loss of habitat and biodiversity and the loss of natural beauty In exchange we get malls retail strips and an ugly sprawl that degrades people and community How have we come to this and more importantly how might we find a better sustainable approach to the use of land Land use decisions are the result of complex interactions among law economics landscape characteristics population growth social and political forces ethics and aesthetics Under the Blade The Conversion of Agricultural Landscapes examines the loss of farmland and other rural lands from each of these perspectives and shows how interactions among different factors greatly complicate sustainable land management Included throughout the seven main chapters of the book are descriptions of some of the tools and strategies that can be used to preserve farmland and guide development The application of these tools is illustrated by 22 case studies of towns and regions throughout the United States each with a somewhat different challenge response and degree of success or failure Dietrich Bonhoeffer a Protestant theologian hanged by the Nazis in 1945 stated that the ultimate

test of a moral society is the kind of world that it leaves to its children Our current choices in the use of the land are among the most important factors shaping that future world and Under the Blade demonstrates that the quality of that future is far from certain **General Technical Report PNW-GTR** ,2001 Rocky Mountain Divide John B. Wright,2010-07-22 The opposing forces of conservation and development have shaped and will continue to shape the natural environment and scenic beauty of the American West Perhaps nowhere are their opposite effects more visible than in the neighboring states of Colorado and Utah so alike in their spectacular mountain environments yet so different in their approaches to land conservation This study explores why Colorado has over twenty five land trusts while Utah has only one John Wright traces the success of voluntary land conservation in Colorado to the state s history as a region of secular commerce As environmental consciousness has grown in Colorado people there have embraced the businesslike approach of land trusts as simply a new more responsible way of conducting the real estate business In Utah by contrast Wright finds that Mormon millennialism and the belief that growth equals success have created a public climate opposed to the formation of land trusts As Wright puts it environmentalism seems to thrive in the Centennial state within the spiritual vacuum which is filled by Mormonism in Utah These findings remind conservationists of the power of underlying cultural values that affect their efforts to preserve private lands Environment and Planning ,2003 Publishes interdisciplinary research on issues of Government and Policy with an international perspective Committed to a broad range of policy questions not just those related to government and public policy Topics covered include nonstate agents private public collaboration and NGOs nongovernmental organisations All areas of economic social and environmental institutions and policy are included Disciplines from which papers are derived include political science planning geography economics law sociology and public administration *Water Policy in New Mexico* David Brookshire,Hoshin Gupta,Olen Paul Matthews,2013-07-04 This book addresses water management issues in the State of New Mexico It focuses on our current understanding of the natural world capabilities in numerical modeling existing and evolving regulatory frameworks and specific issues such as water quality endangered species and the evolution of new water management institutions Similar to its neighboring states New Mexico regularly experiences cycles of drought It is also experiencing rapid economic growth while at the same time is experiencing a fundamental climate shift These factors place severe demands on its scarce water resources In addition to historical uses by the native inhabitants of the region and the agricultural sector new competitive uses have emerged which will require reallocation This effort is complicated by unadjudicated water rights the need to balance the ever increasing needs of growing urban and rural populations and the requirements of the ecosystem and traditional users It is clear that New Mexico as with other semi arid states and regions must find efficient ways to reallocate water among various beneficial uses This book discusses how a proper coordination of scientific understanding modeling advancements and new and emerging institutional structures can help in achieving improved strategies for water policy and management To do so it calls upon the

expertise of academics from multiple disciplines as well as officials from federal and state agencies to describe in understandable terms the issues currently being faced and how they can be addressed via an iterative strategy of adaptive management
