Science The Revenge Of Nature:

Against Nature Steven Vogel, 1996-01-01 *Against Nature* examines the history of the concept of nature in the tradition of Critical Theory with chapters on Lukacs Horkheimer and Adorno Marcuse and Habermas It argues that the tradition has been marked by significant difficulties with respect to that concept that these problems are relevant to contemporary environmental philosophy as well and that a solution to them requires taking seriously and literally the idea of nature as socially constructed

The Nature of Science James Trefil, 2003 The ultimate science handbook for the home explains in everyday terms 200 of the most important laws and principles that define one's sense of the physical world 100 full color illustrations photos

Futurenatural Jon Bird, Barry Curtis, Melinda Mash, Tim Putnam, George Robertson, Lisa Tickner, 1996-03-21 Brings together leading theorists of culture and science to discuss the concept of nature Recent developments in biotechnologies electronic media and ecological politics are discussed

A Chapter of Science; Or, What is a Law of Nature? James Stuart, 187? *Regarding Nature* Andrew McLaughlin, 1993-01-01 McLaughlin philosophy City U of New York argues that industrialism is the cause of our current environmental crisis and that the solution requires a fundamental change in how we understand nature and humanity He reviews the capitalist socialist industrial and scientific views of nature the ideology of control anthropocentrism and other topics Paper edition unseen 16 95 Annotation copyright by Book News Inc Portland OR

Environmentalism And Political Theory Robyn Eckersley, 2023-01-06 This book represents the consolidation of a new field of political enquiry that is becoming an increasingly important component of political studies throughout the world Eckersley's interdisciplinary study builds bridges between environmental philosophy ecological thought and political enquiry using a range of new insights from environmental philosophy to outline a particular Green political perspective Aims to provide a detailed and comprehensive examination of the impact of environmentalism on contemporary political thought

The Return of Nature John Bellamy Foster, 2021-06-01 Winner 2020 Isaac and Tamara Deutscher Memorial Prize A fascinating reinterpretation of the radical and socialist origins of ecology Twenty years ago John Bellamy Foster's *Marx's Ecology Materialism and Nature* introduced a new understanding of Karl Marx's revolutionary ecological materialism More than simply a study of Marx it commenced an intellectual and social history encompassing thinkers from Epicurus to Darwin who developed materialist and ecological ideas Now with *The Return of Nature Socialism and Ecology* Foster continues this narrative In so doing he uncovers a long history of the efforts to unite questions of social justice and environmental sustainability and helps us comprehend and counter today's unprecedented planetary emergencies The *Return of Nature* begins with the deaths of Darwin 1882 and Marx 1883 and moves on until the rise of the ecological age in the 1960s and 1970s Foster explores how socialist analysts and materialist scientists of various stamps first in Britain then the United States from William Morris and Frederick Engels to Joseph Needham Rachel Carson and Stephen J Gould sought to develop a dialectical naturalism rooted in a critique of capitalism In the process he delivers a far reaching and fascinating

reinterpretation of the radical and socialist origins of ecology Ultimately what this book asks for is nothing short of revolution a long ecological revolution aimed at making peace with the planet while meeting collective human needs Nature, Technology, and Society Victor Ferkiss,1994-11 Traces cultural attitudes toward the environment and technology across the span of human civilization While all human societies have enlisted technologies to control nature the last hundred years have witnessed the technological exploitation and destruction of natural resources on an unprecedented scale As environmental groups and the scientific community sound the alarm about deforestation global warming and ozone depletion the obvious question arises how did we get where we are today In *Nature Technology and Society* Victor Ferkiss sets out to answer this central question arguing that we cannot escape from our present environmental predicament unless we understand the ideas which have created it Ferkiss asks the basic questions concerning humans and their relationship to the environment He traces cultural attitudes towards the environment from early mankind to the present day This fascinating book is distinctive both in its comprehensiveness and in its attempt to place side by side influential thinkers and movements with varied views on these issues **Nature** ,1882 *Psychoanalysis Science and Masculinity* Karl Figlio,2014-01-02 First published in 2001 Routledge is an imprint of Taylor Francis an informa company *Metaphysical Grounds of the Science of Nature* Karl Friedrich Fröbel,1924 **Science and revenge of nature** C. Fred Alford,1985 *Sociology And Nature* Raymond Murphy,2018-03-05 Sociology as if nature did not matter has been the sociological expression of modern societies negligent of the processes of nature In response to this ecological blindness Raymond Murphy examines the limitations of sociology that have resulted from this neglect Humanity s success in manipulating nature destabilizes the natural support system of society on a planetary scale and in turn destabilizes all of society s institutions Because the manipulation of nature has become so central to modern society society Murphy argues can now be understood only in terms of the interaction between social action and the processes of nature The growing awareness that social constructions unleash dynamic processes of nature processes beyond human control that bear on social action has the potential of radically transforming sociology Sociology and Nature proposes the reconstruction of sociology in which nature does matters developing a novel sociological approach that situates social action in its natural context Reconsideration of Science and Technology II Liu Dachun,Ai Zhiqiang,Yang Huili,2022-09-30 In reviewing and reconsidering the intellectual history of scientism and antiscientism the authors assess the process of reasoning and prejudices of these contrasting viewpoints while discussing the repercussions of scientific hegemony and its contemporary criticism As the second volume of a three volume set that proposes to reconsider science and technology and explores how the philosophy of science and technology responds to an ever changing world this title focuses on ideological trends centering around scientism and anti scientism since the 19th century The six chapters look into the emergence of scientism instrumental reason scientific optimism scientific pessimism scientific crisis and irrationalism and finally the deconstruction of scientism The authors provide insight into the connections and biases of these

disparate views and critiques explore the influences of the hegemony of science and contemporary critique of science and evaluate the value of postmodernism and deconstructivism The volume will appeal to scholars and students interested in the philosophy of science and technology the ideology of scientism and anti scientism modernism and postmodernism Marxist philosophy and topics related to scientific culture Contagion Capitalism Sean Creaven,2023-12-15 Contagion Capitalism situates the COVID 19 pandemic within the systems of global political economy and their attendant cultural modes and theorizes that these systems act as facilitators and drivers of global pandemic risk Contagion Capitalism therefore critiques the institutionalized corporate capitalist control of the economy the state and science and the grave consequences this has on global public health policy the ecological crisis of sustainability and zoonotic pandemic events such as COVID 19 In doing so this book addresses the failings of what may be termed as state science or establishment science in managing the pandemic as personified especially by those elements of the scientific elite placed in the service of the neoliberal state This book also explores the limitations of corporate pharmacological technoscience in safeguarding public health arguing that Big Pharma offers only partial remedies for problems of human illness and well being poses its own dangers to public health and obfuscates the social bases of public ill health and of pandemic risk Contagion Capitalism further argues that COVID 19 will not be the last or even the most dangerous such epidemiological event This is because the social production and global dissemination of zoonotic diseases is integral to contemporary capitalism by virtue of its instrumental mode of science its central dynamic of production for the sake of accumulation and the consumer mode this sustains as its own condition of existence These are the drivers of what may be termed as zoonotic accelerationism Contagion Capitalism will appeal to scholars in the humanities and social sciences with interests in neoliberal ideology and global political economy and their impact upon social political and cultural life **Crisis System** Petter Naess,Leigh Price,2016-06-17 This book throws light onto the nature and causes of three different but strongly interconnected crises in contemporary societies worldwide an economic crisis an ecological crisis and a normative moral and political crisis These crises are reflected in the profoundly inequitable distribution of wealth resources and life opportunities around the world If we follow the causal roots of these crises we are led back to an inherent dynamic in the capitalist economic system itself discursively expressed as neoclassical mainstream economics For instance by conflating human needs with market demand mainstream economics disregards the needs of those who do not have sufficient purchasing power as well as any needs that cannot be quantified or monetised in some way Mainstream economics also ignores the notion of natural limits Furthermore it seems that everything that is quantifiable is potentially for sale and this results in the substitution of nature indigenous cultural traditions and various life forms with commodities and human capital The latter is defined as the skills instrumental for continual economic growth Besides critiquing the academic discipline of economics this book also points to a number of dysfunctional and crisis prone structures and practices of substantive economic life It will be of interest to students and scholars working in philosophy

economics and environmental studies **Reconsideration of Science and Technology I** Liu Dachun, Wang Bolu, Ding Junqiang, Liu Yongmou, 2022-09-30 This volume analyzes Karl Marx's understanding of science and technology and how it is associated with his focus on the perspective of history and human practice seeking to illuminate a renewed understanding of science and technology from a Marxist angle As the first volume of a three volume set that proposes to reconsider science and technology and explores how the philosophy of science and technology responds to an ever changing world the book delves into Marx's analysis of scientific and technological problems and phenomena across five chapters The authors explain the positioning of science and technology and the Marxist theoretical perspective of history and practice from which Marx's views on science and technology derive before an examination of three focal dimensions pertaining to science and technology productivity technological alienation and liberty Not always viewed as central to Marx's works discussions on science and technology are often underdeveloped but a reinterpretation of Marx's thoughts on the issues corroborates the efficacy of Marxism in terms of understanding today's world and especially the development of science and technology The volume will appeal to scholars and students interested in Marxist philosophy the philosophy of science and technology and topics related to scientific culture **Emerson's Nonlinear Nature** Christopher J. Windolph, 2007 Examines Emersonian naturalism from the standpoint of nonlinearity offering new ways of reading and thinking about Emerson's stance toward nature and the influence of science on his thought Windolph breaks new ground by exploring how considerations of shape and the act of seeing underpin all of Emerson's theories about nature Provided by publisher **Nature and Nurture in French Social Sciences, 1859-1914 and Beyond** Martin S. Staum, 2011 The relative importance of heredity or environmental influence remains an enduring hotly debated issue while the legacy of scientific racism and sexism still tarnishes the twenty first century This unique study analyzes how theories of inherited difference including race and gender affected French social scientists in the late nineteenth and early twentieth centuries The prevailing assumption has been that French ethnographers highlighted the cultural and social environment while anthropologists emphasized the scientific study of head and body shapes Martin Staum shows that the temptation to gravitate towards one pole of the nature nurture continuum often resulted in reluctant concessions to the other side Psychologists Th odile Ribot and Alfred Binet for example were forced to recognize the importance of social factors Non Durkheimian sociologists were divided on the issue of race and gender as progressive and tolerant attitudes on race did not necessarily correlate with flexible attitudes on gender Recognizing this allows Staum to raise questions about the theory of the equivalence of all marginalized groups Anthropological institutions re organized before the First World War sometimes showed decreasing confidence in racial theory but failed to abandon it completely Staum's chilling epilogue discusses how the persistent legacy of such theories was used by extremist anthropologists outside the mainstream to deploy racial ideology as a basis of persecution in the Vichy era Telos ,1989
