Mathematical Programs With Equilibrium Constraints:

Mathematical Programs with Equilibrium Constraints Zhi-Quan Luo, Jong-Shi Pang, Daniel Ralph, 1996-11-13 This book provides a solid foundation and an extensive study for an important class of constrained optimization problems known as Mathematical Programs with Equilibrium Constraints MPEC which are extensions of bilevel optimization problems The book begins with the description of many source problems arising from engineering and economics that are amenable to treatment by the MPEC methodology Error bounds and parametric analysis are the main tools to establish a theory of exact penalisation a set of MPEC constraint qualifications and the first order and second order optimality conditions The book also describes several iterative algorithms such as a penalty based interior point algorithm an implicit programming algorithm and a piecewise sequential quadratic programming algorithm for MPECs Results in the book are expected to have significant impacts in such disciplines as engineering design economics and game equilibria and transportation planning within all of which MPEC has a central role to play in the modelling of many practical problems *Mathematical Programs with Equilibrium Constraints (MPECs) in Process Systems Engineering* Brian Baumrucker, 2009 **Mathematical Programs with Equilibrium Constraints (MPECs) in Process Engineering** Arvind Uppili Raghunathan, 2004 **Mathematical Programs with Equilibrium Constraints** Holger Scheel, Stefan Scholtes, 1996 Nonsmooth Approach to Optimization Problems with Equilibrium Constraints Jiri Outrata, M. Kocvara, J. Zowe, 1998-07-31 This book presents an in depth study and a solution technique for an important class of optimization problems This class is characterized by special constraints parameter dependent convex programs variational inequalities or complementarity problems All these so called equilibrium constraints are mostly treated in a convenient form of generalized equations The book begins with a chapter on auxiliary results followed by a description of the main numerical tools a bundle method of nonsmooth optimization and a nonsmooth variant of Newton s method Following this stability and sensitivity theory for generalized equations is presented based on the concept of strong regularity This enables one to apply the generalized differential calculus for Lipschitz maps to derive optimality conditions and to arrive at a solution method A large part of the book focuses on applications coming from continuum mechanics and mathematical economy A series of nonacademic problems is introduced and analyzed in detail Each problem is accompanied with examples that show the efficiency of the solution method This book is addressed to applied mathematicians and engineers working in continuum mechanics operations research and economic modelling Students interested in optimization will also find the book useful Mathematical Programs with Equilibrium Constraints: Solution Techniques from Parametric Optimization Gemayqzel Bouza Allende, 2006 **Algorithms for Mathematical Programs with Equilibrium Constraints with Applications to Deregulated Electricity Markets** Heiko Pieper, 2001 **Optimality Conditions for Mathematical Programs with Equilibrium Constraints** Michael L.
