Mathematical Theory of Reliability Richard E. Barlow, Frank Proschan, 1996-01-01 This monograph presents a survey of mathematical models useful in solving reliability problems It includes a detailed discussion of life distributions corresponding to wearout and their use in determining maintenance policies and covers important topics such as the theory of increasing decreasing failure rate distributions optimum maintenance policies and the theory of coherent systems The emphasis throughout the book is on making minimal assumptions and only those based on plausible physical considerations so that the resulting mathematical deductions may be safely made about a large variety of commonly occurring reliability situations The first part of the book is concerned with component reliability while the second part covers system reliability including problems that are as important today as they were in the 1960s Mathematical reliability refers to a body of ideas mathematical models and methods directed toward the solution of problems in predicting estimating or optimizing the probability of survival mean life or more generally life distribution of components and systems The enduring relevance of the subject of reliability and the continuing demand for a graduate level book on this topic are the driving forces behind its republication Unavailable since its original publication in 1965 Mathematical Theory of Reliability now joins a growing list of volumes in SIAM's Classics series Although contemporary reliability books are now available few provide as mathematically rigorous a treatment of the required probability background as this one

Rankings and Preferences Joaquim Pinto da Costa, 2015-09-15 This book examines in detail the correlation more precisely the weighted correlation and applications involving rankings A general application is the evaluation of methods to predict rankings Others involve rankings representing human preferences to infer user preferences the use of weighted correlation with microarray data and those in the domain of time series In this book we present new weighted correlation coefficients and new methods of weighted principal component analysis We also introduce new methods of dimension reduction and clustering for time series data and describe some theoretical results on the weighted correlation coefficients in separate sections
