**The Mathematical Theory of Information** Jan Kåhre, 2012-12-06 The general concept of information is here for the first time defined mathematically by adding one single axiom to the probability theory This Mathematical Theory of Information is explored in fourteen chapters 1 Information can be measured in different units in anything from bits to dollars We will here argue that any measure is acceptable if it does not violate the Law of Diminishing Information This law is supported by two independent arguments one derived from the Bar Hillel ideal receiver the other is based on Shannon s noisy channel The entropy in the classical information theory is one of the measures conforming to the Law of Diminishing Information but it has however properties such as being symmetric which makes it unsuitable for some applications The measure reliability is found to be a universal information measure 2 For discrete and finite signals the Law of Diminishing Information is defined mathematically using probability theory and matrix algebra 3 The Law of Diminishing Information is used as an axiom to derive essential properties of information Byron s law there is more information in a lie than in gibberish Preservation no information is lost in a reversible channel Etc The Mathematical Theory of Information supports colligation i e the property to bind facts together making two plus two greater than four Colligation is a must when the information carries knowledge or is a base for decisions In such cases reliability is

always a useful information measure Entropy does not allow colligation
