Matter And Light The New Physics:

Matter and Light - The New Physics Louis De Broglie, 2013-04-18 THE amiable insistence of my friend Andr George has induced me to collect in the present Volume a number of Studies on contemporary Physics written from both the general and the more metaphysical point of view Each of these Studies forms an independent whole and can be read by itself A slight degree of repetition which the reader is asked to overlook has been the inevitable result for on more than one occasion I have been compelled to duplicate a summary of the great fundamental stages of contemporary Physics such as the classification of simple substances the investigation of the photo electric effect and the origin of the Theory of Light Quanta and of Wave Mechanics the subjects are somewhat technical and I cannot well assume that they are common knowledge But though the same subject is outlined in several of these Studies I have tried to take up a different point of view in each and have endeavoured to throw light on different aspects of the essential problems of Quantum Physics in order to facilitate a grasp of their importance On comparing the different chapters the reader will observe that while overlapping they also complement one another and he will feel the fascination and greatness inherent in the vast structure of modern Physics And while admiring the vast number and the extreme delicacy of experimental facts which laboratory physicists have succeeded in revealing and the strange and brilliant concepts devised by theorists to explain them he will appreciate to what a degree the methods and ideas of physicists have grown in subtlety during recent years and how great has been the progress from the somewhat ingenuous Realism and the over simplified Mechanics of earlier thinkers The more deeply we descend into the minutest structures of Matter the more clearly we see that the concepts evolved by the mind in the course of everyday experience especially those of Time and Space must fail us in an endeavour to describe the new worlds which we are entering One feels tempted to say that the outlines of our concepts must undergo a progressive blurring in order that they may retain some semblance of relevance to the realities of the subatomic scales Time and Space in other words are too loose a dress for the elementary entities individuality becomes attenuated in the mysterious processes of interaction and even Determinism the darling of an older generation of physicists is forced to yield But the great book of Science is never finished other surprises await us who knows what mysteries are hidden within the nucleus of an atom which although a million million times smaller than the smallest living thing is yet a universe in itself

Stebbing, 2018-05-08 This book is written by a philosopher for other philosophers and for that section of the reading public who buy in large quantities and no doubt devour with great earnestness the popular books written by scientists for their enlightenment We common readers to adapt a phrase from Samuel Johnson are fitted neither to criticize physical theories not to decide what precisely are their implications We are dependent upon the scientists for an exposition of those developments which so we find them proclaiming have important and far reaching consequences for philosophy Unfortunately however our popular expositors do not always serve us very well The two who are most widely read in this country are Sir Arthur Eddington and Sir James Jeans They are not always reliable guides Their influence has been considerable upon the reading public upon theologians and upon preachers they have even misled philosopher who should have known better Accordingly it has seemed to me to be worth while to examine in some detail the philosophical views that they have put forth and to criticize the grounds upon which these views are based *The Who's Who of Nobel Prize*

Cosmological Inflation, Dark Matter and Dark Energy Kazuharu Bamba, 2019-11-14 Various cosmological observations support not only cosmological inflation in the early universe which is also known as exponential cosmic expansion but also that the expansion of the late time universe is accelerating To explain this phenomenon the existence of dark energy is proposed In addition according to the rotation curve of galaxies the existence of dark matter which does not shine is also suggested If primordial gravitational waves are detected in the future the mechanism for realizing inflation can be revealed Moreover there exist two main candidates for dark matter The first is a new particle the existence of which is predicted in particle physics The second is an astrophysical object which is not found by electromagnetic waves Furthermore there are two representative approaches to account for the accelerated expansion of the current universe One is to assume the unknown dark energy in general relativity The other is to extend the gravity theory to large scales Investigation of the origins of inflation dark matter and dark energy is one of the most fundamental problems in modern physics and cosmology The purpose of this book is to explore the physics and cosmology of inflation dark matter and dark energy
