Water Services Management and Governance Tapio Katko, Petri S. Juuti, Klaas Schwartz, 2012-10-14

Water Services Management and Governance focuses on water services, water supply, wastewater services and deals with connections between water resources and services and water resources. It covers water supply mainly in urban communities, sanitation and pollution control and water resources and their linkages to water services. This book is divided into four key sections relating to governance, frameworks, technology and socio-ecological interactions, government and governance and long-term policies. The chapters analyse the complexity of the water services sector based on a historical analysis of developments within the sector. The underlying conviction is that only by understanding past trends, processes and developments can the current situation in the water services be understood. Only through this understanding can policies for sustainable water services in the future be formulated. The four key sections relate to governance, frameworks, technology and socio-ecological interactions, government and governance and long-term policies.

Water Services Management and Governance raises awareness that an understanding of the past is a necessity to explore potential, probable and preferable futures. It is an essential basis for water sector reforms in any country, region or community. The book is written for experts in water utilities, ministries, municipalities, NGOs, donor agencies, private companies and regulators as well as students and researchers in water policy and governance and the management of water resources, services and infrastructure.
