Herr, 2018-04-02 Life beyond the Boundaries explores identity formation on the edges of the ancient Southwest Focusing on some of the more poorly understood regions including the Jornada Mogollon the Gallina and the Pimer a Alta the authors use methods drawn from material culture science anthropology and history to investigate themes related to the construction of social identity along the perimeters of the American Southwest Through an archaeological lens the volume examines the social experiences of people who lived in edge regions Through mobility and the development of extensive social networks people living in these areas were introduced to the ideas and practices of other cultural groups As their spatial distances from core areas increased the degree to which they participated in the economic social political and ritual practices of ancestral core areas increasingly varied As a result the social identities of people living in edge zones were often though not always fluid and situational Drawing on an increase of available information and bringing new attention to understudied areas the book will be of interest to scholars of Southwestern archaeology and other researchers interested in the archaeology of low populated and decentralized regions and identity formation Life beyond the Boundaries considers the various roles that edge regions played in local and regional trajectories of the prehistoric and protohistoric Southwest and how place influenced the development of social identity Contributors Lewis Borck Dale S Brenneman Jeffery J Clark Severin Fowles Patricia A Gilman Lauren E Jelinek Myles R Miller Barbara J Mills Matthew A Peoples Kellam Throgmorton James T Watson **A Natural History of California** Allan A. Conservation Across Borders Charles C. Chester, 2012-02-13 Conservationists have long been aware that political boundaries rarely coincide with natural boundaries From the establishment of early peace parks to the designation of continental migratory pathways a wide range of transborder mechanisms to protect biodiversity have been established by conservationists in both the public and private sectors Conservation Across Borders presents a broad overview of the history of transboundary conservation efforts and an accessible introduction to current issues surrounding the subject Through detailed examinations of two initiatives the International Sonoran Desert Alliance ISDA and the Yellowstone to Yukon Initiative Y2Y the book helps readers understand the benefits and challenges of landscape scale protection In addition to discussing general concepts and the specific experience of ISDA and Y2Y the author considers the emerging concept of conservation effectiveness and offers a comparative analysis of the two projects The book ends with a discussion of the complex relationships among civil society governments and international borders By considering the history goals successes and failures of two divergent initiatives the book offers important insights into the field of transborder conservation along with valuable lessons for those studying or working in the field

Van Devender, 2019-04-15 One of the most recognizable animals of the Southwest the desert tortoise *Gopherus agassizii* makes its home in both the Sonoran and Mohave Deserts as well as in tropical areas to the south in Mexico Called by Tohono O odham people *komik c ed* or shell with living thing inside it is one of the few desert creatures kept as a domestic pet as well as one of the most studied reptiles in the world Most of our knowledge of desert tortoises comes from studies of Mohave Desert populations in California and Nevada However the ecology physiology and behavior of these northern populations are quite different from those of their southern Sonoran Desert and tropical cousins which have been studied much less Differences in climate and habitat have shaped the evolution of three races of desert tortoises as they have adapted to changes in heat rainfall and sources of food and shelter as the deserts developed in the last ten million years This book presents the first comprehensive summary of the natural history biology and conservation of the Sonoran and Sinaloan desert tortoises reviewing the current state of knowledge of these creatures with appropriate comparisons to Mohave tortoises It condenses a vast amount of information on population ecology activity and behavior based on decades of studying tortoise populations in Arizona and Sonora Mexico and also includes important material on the care and protection of tortoises Thirty two contributors address such topics as tortoise fossil records DNA analysis and the mystery of secretive hatchlings and juveniles Tortoise health is discussed in chapters on the care of captives and original data are presented on the diets of wild and captive tortoises the nutrient content of plant foods and blood parameters of healthy tortoises Coverage of conservation issues includes husbandry
