Green Chemistry and Agro-food Industry: Towards a Sustainable Bioeconomy Stéphanie Baumberger, 2024-04-22 The objective of the book is to show the complementarity and integration of food and non food value chains for the development of a sustainable bioeconomy One current challenge facing industry and the economy is to meet the needs of a growing world population while preserving the environment The use of fossil energy resources for several decades has generated a decrease in reserves of these resources together with a phenomenon of global warming due to the release of greenhouse gases into the atmosphere More and more industrial sectors including the chemical industry are replacing fossil carbon with renewable carbon The bioeconomy consists in using renewable biological resources to produce food materials and energy A bioeconomy based on the green chemistry and biotechnologies is developing worldwide as a lever for reducing the ecological footprint of human activities The book is articulated around six parts each dedicated to a keystone of the interface between green chemistry and Agro Food Industry

Alternatives to Conventional Food Processing Andrew Proctor, 2018-01-17

Traditional thermal and freezing processing techniques have been effective in maintaining a safe high quality food supply However increasing energy costs and the desire to purchase environmentally responsible products have been a stimulus for the development of alternative technologies Furthermore some products can undergo quality loss at high temperatures or freezing which can be avoided by many alternative processing methods This second edition of Alternatives to Conventional Food Processing provides a review of the current major technologies that reduce energy cost and reduce environmental impact while maintaining food safety and quality New technologies have been added and relevant legal issues have been updated Each major technology available to the food industry is discussed by leading international experts who outline the main principles and applications of each The degree to which they are already in commercial use and developments needed to extend their use further are addressed This updated reference will be of interest to academic and industrial scientists and engineers across disciplines in the global food industry and in research and to those needing information in greener or more sustainable technologies
