Motivation Evelyn Satinoff, Philip Teitelbaum, 2013-11-11 Motivation addresses a central problem in psychology Why does an animal s behavior fluctuate in the face of an unaltered environment In a sense this is the opposite of the question from which work on motivation began and for which Claude Bernard invented the concept of the fixity of the internal milieu How does an animal maintain constancy in the face of a fluctuating environment Dealing with motivation has become extremely complex as new experiments phenomena and theories have extended the concept This book embodies some of the ways in which work on motivation is currently proceeding One of the major changes has been the recognition that motivation cannot be explained without an understanding of the biological rhythms and activational systems that underlie behavior Another is that ecological and evolutionary perspectives add enormously to answering the central problem of why an animal does what it does when it does The book suffers from several omissions There is no chapter on the development of motivated behavior There is none on reward systems in the brain owing to the untimely death of James Olds whose contribution would have enriched this book appreciably and to whom we dedicate it EVELYN SATINOFF PHILIP TEITELBAUM VII Contents PART I UNDERLYING ACTIVATIONAL SYSTEMS CHAPTER 1 Motivation Biological Clocks and Temporal Organization of Behavior 3 Irving Zucker Reactivity to External Stimuli 6 Reactivity to Interoceptive Stimuli 7 Sources of Biological Rhythmicity 9 Rhythm Generation 9 Rhythm Synchronization 10 Consequences of Rhythm Desynchronization 11

Handbook of the Sociology of Emotions Jan Stets, Jonathan H. Turner, 2007-02-25 For almost thirty years sociologists have increasingly theorized about and conducted research on human emotions Surprisingly it was not until the 1970s that the sociology of emotions emerged as a

coherent field of inquiry What makes this late date surprising is that it is now obvious that human behavior interaction and organization are driven by emotions It was an immense oversight for emotions to be de emphasized in sociological theorizing and research for most of its 175 year history Since the 1970s however the study of emotions has accelerated and is now at the forefront of sociological analysis This book is designed to bring the reader up to date on the theory and research traditions that have proliferated in the analysis of human emotions Key figures who have carried the sociology of emotions to its current level of prominence review their own work and the work of others who have made contributions to a particular approach to the study of emotions The outcome is a comprehensive book that serves as a primer on the cutting edge of sociological work in what is obviously a key dynamic in human affairs The first section of the book addresses the range of emotions and how they can be classified the neurological underpinnings of emotions and the effect of gender on emotions The second section reviews the prominent sociological theories of emotions including theories emphasizing power and status rituals identity and self psychoanalytic dynamics exchange expectation states and evolution While there is little integration among these theories this state of affairs will not last forever The third section addresses theory and research on specific emotions such as love jealousy and envy empathy sympathy anger grief and the moral emotions While this list does not exhaust the range of human feeling they are central emotions that drive human behavior interaction and social organization The last section explores how the study of emotions has added new insight into other subfields within sociology such as the study of the workplace health and social movements These chapters illustrate how the sociology of emotions can provide new research and theory for the large numbers of specialties within sociology Although no book can completely cover a field even a relatively new one like the sociology of emotions this Handbook of the Sociology of Emotions comes close to being comprehensive The reader will come away with a greater appreciation for how far the sociology of emotions has developed and prospered over the last thirty years

Nurturing Resilience Kathy L. Kain, Stephen J. Terrell, 2018-05-08 A practical integrated approach for therapists working with child and adult patients impacted by developmental trauma and attachment difficulties featuring a foreword by Waking the Tiger author Peter Levine Kathy L Kain and Stephen J Terrell draw on fifty years of their combined clinical and teaching experience to provide this clear road map for understanding the complexities of early trauma and its related symptoms Experts in the physiology of trauma the authors present an introduction to their innovative somatic approach that has evolved to help thousands improve their lives Synthesizing across disciplines Attachment Polyvagal Neuroscience Child Development Theory Trauma and Somatics this book provides a new lens through which to understand safety and regulation It includes the survey used in the groundbreaking ACE Study which discovered a clear connection between early childhood trauma and chronic health problems For therapists working with both adults children and anyone dealing with symptoms that typically arise from early childhood trauma anxiety behavioral issues depression metabolic disorders migraine sleep problems and more this book offers hope for a happier trauma free life
