Macroeconometric Models and European Monetary Union Ullrich Heilemann, Stephen G. Hall, Peter Pauly, 2004-02-02 This volume contains the contributions of a conference dealing with the consequences of the European Monetary Union for the macroeconometric modelling of the Euro area which took place in Essen in 2000 At the end of the conference the participants were convinced that the discussions including a great variety of theoretical methodical and factual aspects from the producers as well as the consumers perspective will not fail to have a certain impact on the future development of macroeconometric modelling in the Euro area Once more it became clear however that an ideal way to a solution of the problems is still not in sight The future development will be characterized by a plurality of approaches and models Thus trends continue which have had a more or less strong durable or temporary influence on the model landscape since the emergence of the monetarist revolution the rational expectations or the real business cycle models We are still at the beginning of the theoretical and empirical exploration of the macroeconomic development of the Euro area it is not always clearly perceptible what is transitory and

what is permanent and this openness should facilitate the reception of the experiences and results which have been presented The idea for this event was developed in the course of the Project LINK One of the highlights of the conference was the participation of the nobel prize winner Professor Dr Lawrence Klein pioneer and Nestor of macroeconomic modelling who as his contribution shows is following up the creation of the European Monetary Union with critical interest

Howlett, Lakhmi C. Jain, 2017-05-25 The volume presents a collection of peer reviewed articles from the 9th KES International Conference on Intelligent Decision Technologies KES IDT 17 held in Vilamoura Algarve Portugal on 21-23 June 2017 The conference addressed critical areas of computer science as well as promoting knowledge transfer and the generation of new ideas in the field of intelligent decision making project management and data analysis The range of topics addressed includes methods of classification prediction data analysis decision support modeling social media and many more in such diverse areas as finance linguistics management and transportation
