Classification of the Geo biosphere into Zonobiomes The biosphere is the thin layer of the earth s surface to which the phenomena connected with living matter are confined On land this comprises the lowest layer of the atmosphere permanently inhabited by living organisms and into which plants extend as well as the root containing portion of the lithosphere which we term the soil Living organisms are also found in all bodies of water to the very depths of the oceans In a watery medium however cycling of material is achieved by means other than those on land and the organisms plankton are so different that aquatic ecosystems have to be dealt with separately The biosphere is therefore subdivided into a the geo biosphere comprising terrestrial ecosystems and b the hydro biosphere comprising aquatic ecosystems which is the field of hydrobiologists oceanographers and limnologists Our studies are confined to the geo biosphere Walter 1976 which constitutes the habitat of man and is therefore of special interest The prevailing climate being the primary independent factor in the environment can be used as a basis for further subdivision of the geo biosphere since the formation of soil and type of vegetation are dependent upon it see p 3 and it has not yet been substantially influenced by man      Current Catalog National Library of Medicine (U.S.),1966 First multi year cumulation covers six years 1965 70      Subject Guide to Books in Print ,1984
