

PRIOR KNOWLEDGE

Prior knowledge refers to the information and skills a learner has already accumulated before entering a new educational endeavor.

EXPLANATION

Prior knowledge represents all of the knowledge someone brings into a new learning experience that can be used to make sense of this new lesson.

When teachers are aware of students' prior knowledge, it can help them develop instructional approaches that maximize the child's learning experience. The learning process will be more efficient and effective.

EXAMPLES

- **Observed Knowledge:** Jessica knows how to cook because she watches closely when her mother cooks at night. It gives her a leg-up when she tries to cook for herself.
- **Getting Lessons Just Right:** Mrs. Smith gives her students a formative test to see how much they know about a topic. She uses this to make sure her first lesson starts at the right level for the class's current abilities.

Verbal Protocols of Reading Michael Pressley, Peter Afflerbach, 2012-12-06 Researchers from a variety of disciplines have collected verbal protocols of reading as a window on conscious reading processes Because such work has occurred in different disciplines many who have conducted verbal protocol analyses have been unaware of the research of others This volume brings together the existing literature from the various fields in which verbal protocols of reading have been generated In so doing the authors provide an organized catalog of all conscious verbal processes reported in studies to date the most complete analysis of conscious reading now available in the literature When the results of all of the studies are considered there is clear support for a number of models of reading comprehension including reader response theories schema perspectives executive processing models and bottom up approaches such as the one proposed by van Dijk and Kintsch The summary of results also demonstrates that none of the existing models goes far enough Thus a new framework constructively responsive reading is described This new model encompasses reader response schematic and executive processing and induction from word and phrase level comprehension to higher order meaning The important concept in this new model is that readers respond to bits and pieces of text as they are encountered all as part of the overarching goal of constructing meaning from text This volume also includes a critical review of the thinking aloud methodology as it has been used thus far This examination suggests that it continues to be an immature methodology and that much work is needed if a complete theory of conscious processing during reading is to be developed via verbal protocol analysis Finally after reviewing what has been accomplished to date the authors provide extensive discussion of the work that remains to be done and the adequacy of the verbal protocol methodology for permitting telling conclusions about text processing
