*Priority Programme of the Deutsche Forschungsgemeinschaft*, 2003      **Priority Programme of the Deutsche Forschungsgemeinschaft: Group III-Nitrides and Their Heterostructures** Friedhelm Bechstedt, Bruno K. Meyer, Martin Stutzmann, 2003-12-12 *physica status solidi c* conferences and critical reviews publishes conference proceedings ranging from large international meetings to specialized topical workshops as well as collections of topical reviews on various areas of current solid state physics research This Special Issue contains a series of Review Articles on several aspects of the epitaxy materials science and applications of group III nitride films and heterostructures written by participants of the Priority Programme SPP 1032 of the German Research Foundation DFG Main topics included are deposition and structure electronic and optical properties as well as devices and device issues      **Colloidal Magnetic Fluids** Stefan

Odenbach, 2009-04-07 Research into the fascinating properties and applications of magnetic fluids also called ferrofluids is rapidly growing making it necessary to provide at regular intervals a coherent and tutorial account of the combined theoretical and experimental advances in the field This volume is an outgrowth of seven years of research by some 30 interdisciplinary groups of scientists theoretical physicists describing the behaviour of such complex fluids chemical engineers synthesizing nanosize magnetic particles experimentalist measuring the fluid properties and mechanical engineers exploring the many applications such fluids offer in turn providing application guided feedback to the modellers and requests for the preparation of new fluid types to chemists in particular those providing optimum response to given magnetic field configurations Moreover recent developments towards biomedical applications widens this spectrum to include medicine and pharmacology Consisting of six large chapters on synthesis and characterization thermo and electrodynamics surface instabilities structure and rheology biomedical applications as well as engineering and technical applications this work is both a unique source of reference for anyone working in the field and a suitable introduction for newcomers to the field

## **High-field EPR Spectroscopy on Proteins and Their Model Systems** Klaus Möbius, Anton Savitsky, 2009

Understanding the major factors determining the specificity of transmembrane transfer processes in proteins is now a hot topic in molecular bio science Advanced electron paramagnetic resonance EPR at high magnetic fields is a powerful technique for characterizing the transient states of proteins in action High Field EPR Spectroscopy on Proteins and their Model Systems characterization of Transient Paramagnetic States offers a comprehensive overview of experimental techniques in and paradigmatic examples of the application of high field EPR spectroscopy in biology and chemistry The book's focus is on the use of the technique in conjunction with site specific mutation strategies and advanced quantum chemical computation methods to reveal protein structure and dynamics This yields new insights into biological processes at the atomic and molecular level The theoretical and instrumental background of high field EPR is described and examples of paradigmatic protein systems such as photosynthetic reaction centres are discussed in the light of recent investigations

Aspects of structure dynamics function relations that are revealed by studying site specific mutants are highlighted thereby combining high field EPR with genetic engineering techniques The information obtained complements that obtained from protein crystallography solid state NMR infrared and optical spectroscopy The book documents both background knowledge and results of the latest research in the field Unique features include comparisons of information content of EPR ENDOR Triple resonance ESEEM and PELDOR taken at different microwave frequencies and magnetic fields Coherent treatment of the subject by the leading Berlin high field EPR laboratory covers the theoretical background as well as state of art research both in terms of instrumentation and application to biological systems The book provides an outlook to future developments and references for further reading and is essential reading for postdoctoral scientists professionals academics and graduate students working in this field

**Molecular, Cellular, and Ecological Processes of Haloarchaea** Yan Liao, Iain G.

Duggin, Maria Ines Gimenez, Zhengshuang Hua, 2025-05-07 Extremely halophilic archaea salt loving archaea termed haloarchaea constitute one of the largest groups within the Archaea and inhabit the most hypersaline environments on Earth Due to their easy cultivation in the laboratory and rapid growth kinetics haloarchaea are excellent models for studying cell biology of Archaea Research into haloarchaea have enabled tremendous progress in various areas of archaeal biology including genetic evolution gene expression and regulation protein synthesis and adaptation structural dynamics and various biotechnological applications The detailed investigation of survival and adaptation mechanisms of haloarchaea to high salt environments have provided key insights into the boundaries of life improving our knowledge on life evolution on Earth and expanding the realms possible for the search for extraterrestrial life

**Fatigue of Materials at Very High Numbers of Loading Cycles** Hans-Jürgen Christ, 2018-11-19 This book represents the final reports of the scientific projects funded within the DFG SPP1466 and hence provides the reader with the possibility to familiarize with the leading edge of VHCF research It draws a balance on the existing knowledge and its enhancement by the joint research action of the priority program Three different material classes are dealt with structural metallic materials long fiber reinforced polymers and materials used in micro electro mechanical systems The project topics address the development of suitable experimental techniques for high frequency testing and damage monitoring the characterization of damage mechanisms and damage evolution the development of mechanism based models and the transfer of the obtained knowledge and understanding into engineering regulations and applications

**Ion Partitioning in Ambient-Temperature Aqueous Systems** H. Stoll, 2010-11-15

Understanding in detail the ion partitioning in mineralwater interactions is of fundamental importance to geochemical studies and ultimately to society The solid solution properties of minerals are a significant part of the complexity and also the importance of these ion partitioning reactions

**Advanced Environmental Sensing Technology II** Tuan Vo-Dinh, 2002

**Intelligent Hydrogels** Gabriele Sadowski, Walter Richtering, 2014-01-28 This volume of Progress in Colloid and Polymer Science assembles original contributions and invited reviews from the priority research program Intelligent Hydrogels

funded by the German Science Foundation DFG since 2006 with about 25 contributing research groups In the center of interest of this program and the present book are responsive hydrogels i e hydrophilic polymer or polyelectrolyte networks that are able to respond to environmental stimuli such as changes in temperature pH additive concentration or electrical field The activities focus on different aspects on hydrogel synthesis on the modeling and simulation of thermophysical hydrogel properties as well as on innovative new hydrogel applications as smart materials The present book summarizes the highlights in the results of the priority program in original contributions and invited reviews     Refractory Organic Substances in the Environment Fritz Hartmann Frimmel, Gudrun Abbt-Braun, Klaus G. Heumann, Berthold Hock, Hans-Dietrich Lüdemann, Michael Spiteller, 2008-01-08 Refractory organic substances ROS are an essential part of the biogeochemical carbon cycle Wherever there is life on earth there will also be ROS in the form of poorly biodegradable leftovers of organisms and as a source for new life Furthermore it is now beyond doubt that ROS are closely related to the carbon intensity identified as one of the driving forces in the dynamics of green house gas emission such that ROS play a key role in sustainable development Refractory Organic Substances in the Environment provides the results of six years of top priority research funded by the Deutsche Forschungsgemeinschaft DFG This research program investigated the structure and function of ROS in different parts of the environment from a chemical physical biological and soil scientific point of view It included the first systematic study of a set of reference samples from Central Europe originating from a bog lake soil seepage water groundwater and from the wastewaters of a brown coal processing plant and a secondary effluent Thus this work not only highlights the structural features obtained from the application of advanced analytical tools but also the function in anthropogenically influenced aquatic systems and soils Of special interest to students and researchers in life sciences

**Devonian Events and Correlations** R. T. Becker, W. T. Kirchgasser, 2007 The Devonian was a peculiar period characterized by simplified plate tectonic configurations climatic overheating and widely flooded continents The bloom of fishes and ammonoids extensive reef complexes and the conquest of land indicate major biosphere innovations punctuated by many global events including two of the biggest mass extinctions The Devonian was the first system for which subdivisions were formally defined This was achieved by significant advances in pelagic biostratigraphy The chronostratigraphic framework and interdisciplinary techniques allow us to correlate intervals or sudden events across facies boundaries in order to reconstruct the sedimentary and evolutionary history of the system with highest precision This volume honors the lifetime stratigraphic achievements of Michael Robert House 1930 2002 Based on case studies from Europe North Africa and North America it shows how the combination of biostratigraphy chemostratigraphy magnetostratigraphy sequence stratigraphy and event stratigraphy can contribute to a much deeper understanding of both regional and global environmental change
